Meridian Industrials (illustrative) DEMO

ADD | STANDARD (FORWARD MULTIPLES + DCF) | CONFIDENCE · HIGH | 12-MONTH HORIZON | 13 OCT 2026

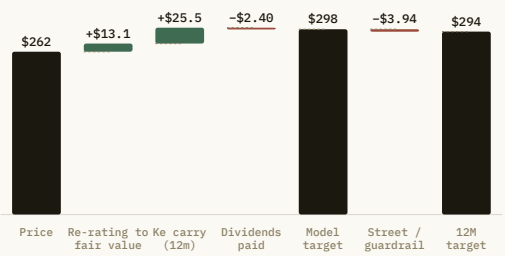

Price
$262.00
DEMO (synthetic)

12-MONTH PRICE TARGET — ADD

BEAR	TARGET	BULL
$243.41	$294.20	$342.17

FROM PRICE TO TARGET — +12%

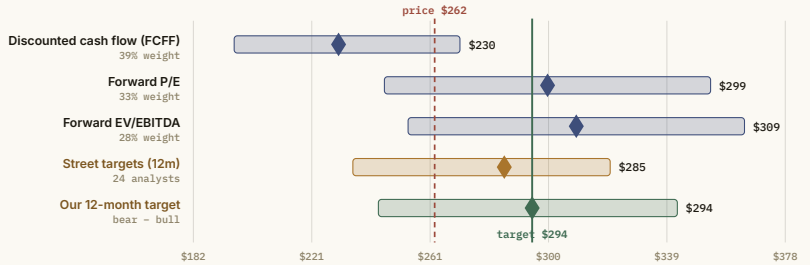

Fair value sits **$13.08 above** the price. Carrying it forward at the 9.3% cost of equity adds **$25.47**, dividends take back $2.40; the Street anchor / guardrail moves it $3.94 down.

KEY FIGURES — USD

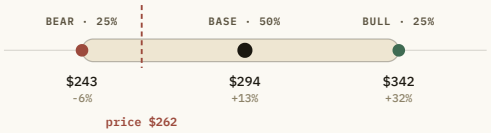

MARKET CAP $398.24bn EV $398.04bn	P/E · NTM 19.0x sector ref 21.0x
EV/EBITDA · NTM 12.8x sector ref 14.0x	FCF YIELD · LTM 5.0% OCF − capex
ROIC 52.9% NOPAT / invested capital	NET DEBT / EBITDA net cash net cash
REVENUE GROWTH · FY+1 7.0% FY2026E consensus	EBIT MARGIN 28.5% latest fiscal year

VALUE PER SHARE BY LENS — fair value today · range

3 lenses blend to a fair value of **$275.08** (dispersion 13%). Street mean $285.00 over 24 analysts.

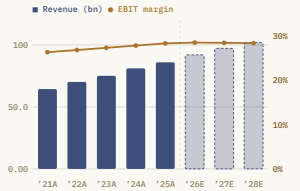

SCENARIOS · 12 MONTHS — E[target] $293.49 (+13%)

CASE	PROB.	TARGET	RETURN	DCF
Bear	25%	**$243.41**	-6%	$195.79
Base	50%	**$294.20**	+13%	$230.27
Bull	25%	**$342.17**	+32%	$270.37

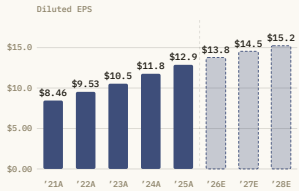

Weighting bear / base / bull 25 / 50 / 25 gives **$293.49** (+13% incl. dividends). Bear and bull come from the lens ranges (DCF bear/bull cases in the last column).

REVENUE & EBIT MARGIN — $bn

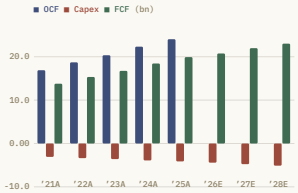

Revenue compounds **+6%** a year to FY2028E on the base case; EBIT margin 29% → 29%.

EPS · ACTUAL & EST. — USD/share

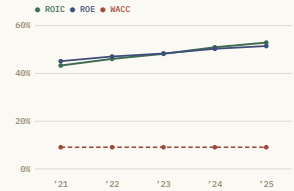

Consensus EPS $13.77 for FY2026; NTM P/E **19.0x**.

CASH GENERATION — $bn

FCF +19.9bn last year, 1.0x net income; capex intensity 0.9x D&A.

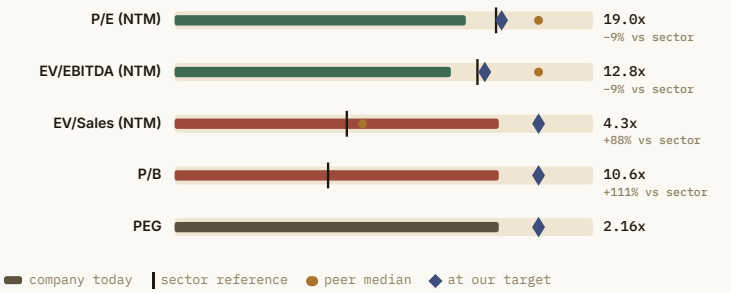

ROIC VS WACC — + ROE

ROIC **53%** vs WACC 9.1%: value-creating growth.

VALUATION VS THE SECTOR

Industrial equipment reference

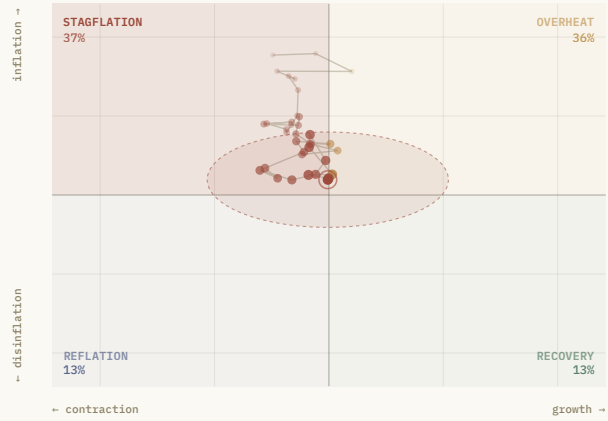

MULTIPLE	TODAY	SECTOR	PREMIUM	AT TARGET
P/E (NTM)	19.0x	21.0x	-9%	21.4x
EV/EBITDA (NTM)	12.8x	14.0x	-9%	14.3x
EV/Sales (NTM)	4.3x	2.3x	+88%	4.9x
P/B	10.6x	5.0x	+111%	11.9x
FCF yield (LTM)	5.0%	—	—	4.5%
Dividend yield	0.9%	—	—	0.8%
PEG	2.16x	—	—	2.42x

19.0x NTM earnings vs a 21.0x sector reference (-9%); 12.8x EV/EBITDA vs 14.0x. At our target the P/E would be 21.4x.

RELOJ DE INVERSIÓN

2026-10 · snapshot

ESTANFLACIÓN Stagflation · weak signal

Estanflación (Stagflation), weak signal: 37% vs 36% for Sobrecalentamiento (Overheat). Industrials has historically lagged the US market by **4.1 pp/yr** in this phase; probability-weighted tilt **-1.4 pp/yr**. The Reloj's playbook holds 26.0% in Industrials in this phase.

INVESTMENT VIEW

what the numbers say

- **Valuation.** Fair value $275.08 vs price $262.00; 12-month target **$294.20** (+12%, +13% with dividends).
- **Fundamentals.** FY+1 revenue +7%; ROIC 53% vs WACC 9.1%; EBIT margin 29%.
- **Earnings quality.** No analyst EPS consensus available; forward EPS is derived from trailing earnings and revenue growth.
- **Cycle.** Reloj reads **Stagflation** (weak signal); Industrials has a probability-weighted tilt of **-1.4 pp/yr** vs the US market.
- **Priced in.** The market discounts year-1 growth of 8% vs our 7%: more than we model.
- **What would change our mind.** A sustained miss on FY+1 revenue or margin; a re-rating of the sector multiple; a move in the cost of equity (9.3% today).

KEY RISKS

ranked

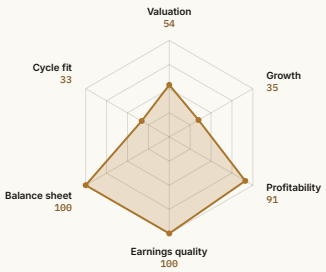

01 Estimate risk: consensus forecasts can be revised sharply, and the forward-multiple lenses move one-for-one with the earnings they are applied to.

02 Multiple risk: target multiples are anchored on sector medians; a de-rating of the peer group lowers the target regardless of company performance.

03 Single third-party data source: restatements, non-recurring items or classification differences can shift the output.

FACTOR SCORECARD

0–100

Valuation	54	Growth	35
Profitability	91	Earnings quality	100
Balance sheet	100	Cycle fit	33

Heuristic scales (thresholds in the appendix); the underlying metric is shown in the financial section.

INVESTMENT THESIS

Why this number

We rate **Meridian Industrials (illustrative) (DEMO) ADD** with a 12-month price target of **$294.20** — a +12% move from $262.00 and a +13% total return including the dividend. The shares look undervalued on 3 lenses: Discounted cash flow (FCFF), Forward P/E, Forward EV/EBITDA. Their weighted fair value today is **$275.08**, rolled forward at the 9.3% cost of equity.

Meridian Industrials (illustrative) generated $85.96bn of revenue at a 29% EBIT margin in the latest fiscal year, having compounded the top line at 8.2% over the historical window. Market capitalisation stands at $398.24bn with $500mn of net cash.

Consensus EPS of $13.77 gives an NTM figure of $13.77, i.e. 19.0x at today's price.

For context, the Street's mean 12-month target is $285.00 (+9%, 24 analysts). Our model-only target of $298.14 sits 5% above it; the published target gives the consensus a 30% weight, a deliberate hedge against model error that we disclose rather than hide.

A reverse DCF shows the market is discounting year-one revenue growth of 8.2% against our 7.0% base — the price already discounts more than we model.

Priced like the sell-side prices it: a target multiple on forward earnings and EBITDA (peer-anchored, adjusted for growth and earnings durability), cross-checked against a 10-year FCFF DCF whose growth decays and whose margins mean-revert.

KEY DATA

Market cap	$398.24bn
Enterprise value	$397.74bn
Net debt	($500mn)
Net debt / EBITDA	net cash
EV / EBITDA (LTM)	13.7x
P/E (LTM)	20.4x
FCF yield (LTM)	4.8%
Dividend yield	0.9%
Beta	1.12
Diluted shares	1,520mn

THE VERDICT

How the 12-month target is built

Each lens answers *what is a share worth?* independently. They are weighted by what fits the business, filtered by plausibility guardrails, rolled forward at the cost of equity and — where it exists — lightly anchored to the Street.

RELATIVE · MULTIPLES	61% OF TARGET	INTRINSIC · CASH FLOWS	39% OF TARGET
Forward P/E	$299.27	Discounted cash flow (FCFF)	$230.27
$245.40 – $353.14	33%	$195.79 – $270.37	39%
Forward EV/EBITDA	$308.77		
$253.21 – $364.32	28%		

FAIR VALUE TODAY

$275.08

PUBLISHED 12-MONTH TARGET

$294.20 +12%

The arithmetic. $275.08 × (1 + 9.26%) − $2.40 dividends = model target **$298.14**; Street mean $285.00 at 30% weight → published **$294.20**.

Confidence: High

- 3 independent lenses agree on a valuation
- lens dispersion is tight (CV 13%)
- model target is within 25% of the Street
- 1 data-quality / earnings-quality flag(s)

Guardrails & disclosures

Target anchored 30% to the Street consensus ($285.00, 24 analysts); model-only target $298.14.

No analyst EPS consensus available; forward EPS is derived from trailing earnings and revenue growth.

INSIDE THE LENSES

Every input, so any number can be challenged

Relative lenses apply a target multiple to forward numbers; the DCF values the cash flows; sector lenses use the model that fits the business.

Discounted cash flow (FCFF)

INTRINSIC · 39% WEIGHT

$230.27

$195.79 – $270.37

WACC	9.10%
Terminal growth	2.50%
PV of explicit FCFF	$161.65bn
PV of terminal value	$188.15bn (54% of EV)
Enterprise value	$349.81bn
+ Net cash (less minorities)	$0.20bn
Equity value	$350.01bn
Value per share	$230.27

10-year FCFF DCF: consensus for the near years, geometric growth decay, mean-reverting margins, terminal reinvestment tied to growth/ROIC. Range = bear/bull scenarios.

Forward P/E

RELATIVE · 33% WEIGHT

$299.27

$245.40 – $353.14

Consensus EPS	$13.77 (FY2026)
Forward EPS	$13.77
Anchor P/E	22.7x — 60% peer median 23.8x (n=5) + 40% Industrial equipment reference 21.0x
Growth adjustment	×0.96 (8.8% durable growth vs 10.0% sector)
Earnings-durability factor	×1.00
Leverage adjustment	×1.00
Target P/E	21.7x
Value per share	$299.27

Target multiple x NTM EPS. The multiple is anchored on peers/sector, then scaled for durable growth, leverage and how far forward earnings sit above what the business has historically earned.

Forward EV/EBITDA

RELATIVE · 28% WEIGHT

$308.77

$253.21 – $364.32

NTM EBITDA (from consensus earnings)	$31.17bn
Anchor EV/EBITDA	15.7x — 60% peer median 16.8x (n=5) + 40% Industrial equipment reference 14.0x
Growth adjustment	×0.96
Earnings-durability factor	×1.00
Target EV/EBITDA	15.0x
Enterprise value	$469.13bn
+ Net cash	$0.50bn
Value per share	$308.77

Capital-structure-neutral cross-check to forward P/E: it values the operating business and then bridges to equity through net debt.

FINANCIAL ANALYSIS

Statements, returns and balance-sheet quality

Reported fiscal years, with the DCF base case and consensus as shaded forecast columns. Forecast free cash flow is unlevered (FCFF).

Multiples struck at the current price/EV against each year's estimates. Forecast EPS approximates net income as (EBIT − LTM interest) × (1−t).

EARNINGS QUALITY

Are the earnings the market is paying for durable?

Trailing EPS	$12.87
Consensus EPS FY2026	$13.77
Consensus EPS FY2027	–
NTM EPS used	**$13.77**
Through-cycle (historical average) EPS	$10.09
Forward ÷ through-cycle	1.4x
Durable EPS growth used	8.8%
Earnings-durability factor on multiples	×1.00
Basis	derived from history

No cyclicality flags. Revenue and margins show no peak-to-trough pattern in the reported history, so forward earnings are capitalised at the full target multiple.

Growth source: historical revenue CAGR (capped at 15%). Multiples price *durable* growth, so a one-year recovery step is never extrapolated, and when forward EPS is far above what the business has historically earned the target multiple is scaled down — the market pays less for peak earnings.

DCF CROSS-CHECK

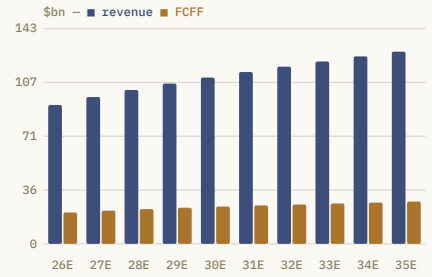

Drivers, cash-flow build and sensitivity

DRIVER	PATH	WHY
Revenue growth	7.0% → 2.5% over 10y	Year 1 follows consensus revenue for FY2026. Growth then decays geometrically from 7.0% to the 2.5% terminal rate as revenue compounds toward $127bn — competitive entry and the law of large numbers compress incremental growth; no single year's step is ever extrapolated.
EBIT margin	28.5% → 28.7% → 28.3% (compresses)	Reported margin is 28.5%; year-1 margin is 28.7%. This is a compounder, so we revert only 30% of the way toward the through-cycle average of 27.3%, landing at 28.3% — crediting some but not all of current profitability as durable.
Reinvestment (capex)	4.8% → 5.7% of sales	Starts at the historical capex intensity (4.8%) against D&A of 5.2%, converging to 1.10x D&A by the terminal year — a steady state that funds growth without permanent over- or under-investment.
Working capital	16.5% of Δrevenue	Incremental working capital absorbs 16.5% of each year's revenue increase (historical median) — a cash drag as the business scales.
Tax rate	19.0%	Normalised to the trailing effective rate of 19.0%, applied to EBIT to derive NOPAT.
Terminal growth	2.5%	At or below long-run nominal GDP (4.0%); a mature going concern cannot outgrow the economy in perpetuity. Terminal reinvestment is g/ROIC.

INDUSTRIALS: EXCESS RETURN BY PHASE

pp/yr vs US market · shrunk (solid) vs raw (pale)

In Stagflation Industrials has returned **1.2%** a year on average (**-4.1 pp/yr** vs the market, t = -1.3, reliability *weak*). Weighted by today's probabilities the sector's expected edge is **-1.4 pp/yr**. Across all sector×phase cells the Reloj tests, 25 of 192 survive false-discovery control.

HISTORICAL EVIDENCE FOR INDUSTRIALS

since 1970

PHASE	ANN.	VS MKT	T	HIT	MO.	SIGNAL
Recovery	10.4%	+1.6	+0.6	58%	187	NO SIGNAL
Overheat	4.3%	-2.5	-0.9	51%	120	NO SIGNAL
Stagflation ●	1.2%	-4.1	-1.3	50%	226	WEAK
Reflation	18.9%	+6.3	+2.1	65%	148	MODERATE

"Ann." is the sector's average annual return while the cycle was in that phase; "vs mkt" the excess over the US market (shrunk estimate); t-statistics are Newey-West. A weak or "no signal" reliability means the data cannot distinguish the sector's phase return from chance.

IYJ · XLI

The company is not among the largest holdings the Reloj tracks, so the sector evidence is context rather than exposure.

Source: Reloj de inversión · snapshot as of 2026-10. This is an analytical tool, not investment advice; the sector tilt is context for the valuation, not an input to the price target.

FACTORS

What moves this stock

TYPE	FACTOR	EXPOSURE	EVIDENCE	WHY / MECHANISM
Macro	**Interest rates / discount rate**	HIGH	75bps of WACC ≈ $25.80/sh (11%); TV = 54% of EV	Long-duration cash flows: the further out the value sits (terminal-heavy), the more a shift in rates or the equity risk premium re-prices the stock, independent of operations.
Macro	**Economic cycle / demand**	LOW	Revenue growth volatility σ = 1.7% over 5y	Historical top-line dispersion is the cleanest read on cyclicality: a stable compounding base decouples from GDP; a volatile one imports the macro cycle into earnings.
Macro	**Inflation / input costs**	MEDIUM	−100bps EBIT margin ≈ −$8.45/sh; margin σ = 0.9%	Cost pass-through is the test: firms with pricing power hold margin through inflation; historical margin volatility shows how much of past cost shocks reached the P&L.
Macro	**Credit & refinancing**	LOW	Net cash position; EBIT/interest = 44.5x	A net-cash balance sheet removes refinancing risk and turns higher rates into interest income rather than a cost.
Micro	**Competitive erosion**	LOW	ROIC−WACC spread = 4,336bps	Excess returns invite entry: the wider the spread, the bigger the prize for competitors — but also the bigger the buffer before growth stops creating value. A thin spread means small competitive slippage flips growth to value destruction.
Micro	**Execution vs expectations**	MEDIUM	Implied y1 growth 8.2% vs base 7.0%	Market expects MORE than our base — priced for execution. The equity reprices on the gap between delivery and what the tape already discounts, not on absolute results.
Micro	**Capital intensity**	LOW	Capex/D&A = 0.92x; capex = 4.8% of sales	Above 1x, the business must keep buying its own growth — FCF conversion stays hostage to the reinvestment cycle; below 1x, depreciation overstates true capital needs and cash conversion runs ahead of earnings.
Micro	**Pricing power / margin stability**	LOW	EBIT margin σ = 0.9% (range 26%–29%)	Stable margins across cycles are the fingerprint of pricing power; wide swings say the company is a price-taker whose profitability belongs to the environment, not the franchise.

CATALYSTS

What each lever is worth

- **Cost of capital:** every 75bps of WACC moves fair value by ≈$25.80/share (11%). Rate path and the equity risk premium are the single biggest swing factor.
- **Terminal growth:** 50bps of perpetuity growth is worth ≈$8.79/share — the market's read on the company's long-run competitive position.
- **Operating margin:** each 100bps of EBIT margin across the forecast is worth ≈$8.45/share — watch pricing power, mix and cost discipline in quarterly prints.
- **Top-line delivery:** our base assumes 7.0% year-one growth fading to 2.5%; sustained beats/misses versus that glide path are the cleanest re-rating trigger either way.

RISKS

Key risks

- Estimate risk: consensus forecasts can be revised sharply, and the forward-multiple lenses move one-for-one with the earnings they are applied to.

- Multiple risk: target multiples are anchored on sector medians; a de-rating of the peer group lowers the target regardless of company performance.
- Single third-party data source: restatements, non-recurring items or classification differences can shift the output.

APPENDIX

Method and definitions

01

Lenses and weights

The target triangulates relative lenses (target multiples on consensus forward numbers, anchored on peers/sector references and adjusted for durable growth, leverage and earnings durability), a 10-year DCF (consensus for the near years, geometric growth decay, mean-reverting margins) and sector models, weighted by company profile.

02

Guardrails

A lens outside 0.2×–5× the price is excluded; lenses > 2.2× away from the median of the others are down-weighted by 60%; the published target is limited to 0.4×–2.5× the price; fewer than two usable lenses, or a result forced by a guardrail, is published NOT RATED.

03

12-month target

Fair value × (1 + cost of equity) − dividends; bear/bull from the lens ranges; Street consensus anchored at up to 30% (scaled by analyst count) and always shown separately.

04

Scorecard scales

Valuation: expected return −30%…+50% → 0…100. Growth: durable EPS growth 0…25% and FY+1 revenue −5…+30%. Profitability: ROIC−WACC −5…+25 pts and EBIT margin 0…35%. Quality: Piotroski share of tests passed, OCF/NI 0.5…1.2, accruals. Balance sheet: net debt/EBITDA, interest cover, Altman zone. Cycle fit: Reloj tilt −4…+4 pp/yr.

05

Piotroski · Altman · Sloan

Piotroski F: nine binary tests of profitability, leverage/liquidity and efficiency (tests that cannot be computed from the available statement lines are excluded, not failed). Altman Z (original industrial form): >2.99 safe, 1.81–2.99 grey, <1.81 distress. Sloan accruals: (net income − OCF) / average assets.

06

Reloj de inversión

Phase probabilities and sector evidence come from the linked project's published data (see source above). Tilt = Σ phase probability × shrunk excess return of the sector in that phase. It describes historical behaviour and is not an input to the price target.

Disclaimer. Generated by an automated, sector-aware valuation engine from public data (DEMO (synthetic)). DEMO was classified as **Standard (forward multiples + DCF)**. Forward numbers come from analyst consensus where available and from reported figures otherwise; they are not a substitute for fundamental judgement.
