Gold Fields Limited GFI

OVERWEIGHT | CYCLICAL / COMMODITIES (MID-CYCLE MULTIPLES + DCF) | CONFIDENCE · HIGH | 12-MONTH HORIZON | 13 OCT 2026

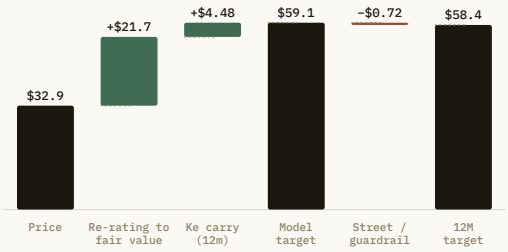

Price
$32.88
Yahoo snapshot as of 2026-07-08

12-MONTH PRICE TARGET — OVERWEIGHT

BEAR	TARGET	BULL
$49.55	$58.38	$67.47

FROM PRICE TO TARGET — +78%

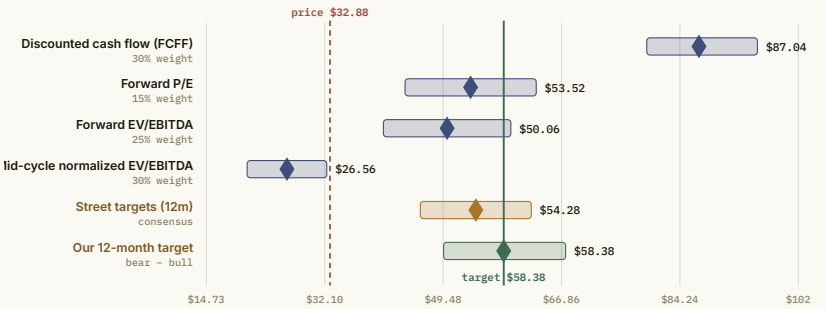

Fair value sits **$21.74 above** the price. Carrying it forward at the 8.2% cost of equity adds **$4.48**; the Street anchor / guardrail moves it $0.72 down.

KEY FIGURES — USD

MARKET CAP $29.41bn EV $31.09bn	P/E · NTM 5.9x sector ref 12.0x
EV/EBITDA · NTM 3.5x sector ref 6.5x	FCF YIELD · LTM 8.1% OCF − capex
ROIC 30.7% NOPAT / invested capital	NET DEBT / EBITDA 0.2x x EBITDA
REVENUE GROWTH · FY+1 25.0% FY2026E consensus	EBIT MARGIN 50.3% latest fiscal year

VALUE PER SHARE BY LENS — fair value today · range

4 lenses blend to a fair value of **$54.62** (dispersion 40%). Street mean $54.28.

SCENARIOS · 12 MONTHS — E[target] $58.44 (+78%)

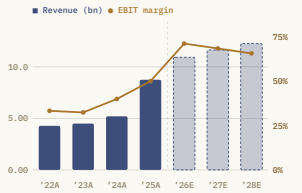

price $32.9

CASE	PROB.	TARGET	RETURN	DCF
Bear	25%	**$49.55**	+51%	$79.38
Base	50%	**$58.38**	+78%	$87.04
Bull	25%	**$67.47**	+105%	$95.62

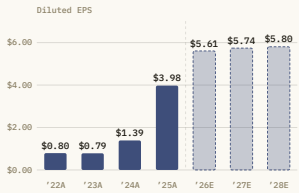

Weighting bear / base / bull 25 / 50 / 25 gives **$58.44** (+78% incl. dividends). Bear and bull come from the lens ranges (DCF bear/bull cases in the last column).

REVENUE & EBIT MARGIN — $bn

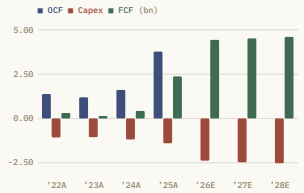

Revenue compounds **+12%** a year to FY2028E on the base case; EBIT margin 50% → 66%.

EPS · ACTUAL & EST. — USD/share

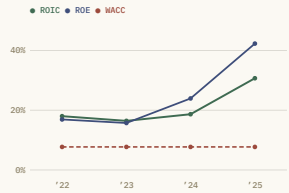

Consensus EPS $5.61 for FY2026; NTM P/E **5.9x**.

CASH GENERATION — $bn

FCF +2.4bn last year, 0.7x net income; capex intensity 1.5x D&A.

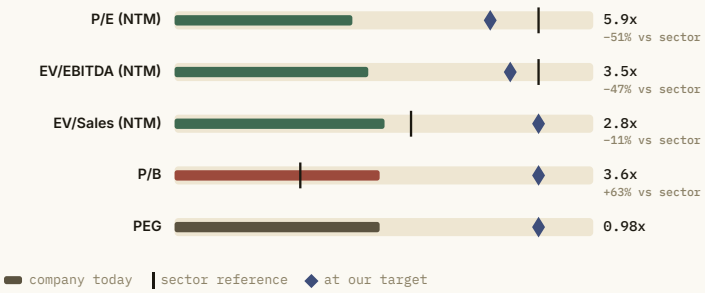

ROIC VS WACC — + ROE

ROIC **31%** vs WACC 7.7%: value-creating growth.

VALUATION VS THE SECTOR

Precious metals reference

company today | sector reference | at our target

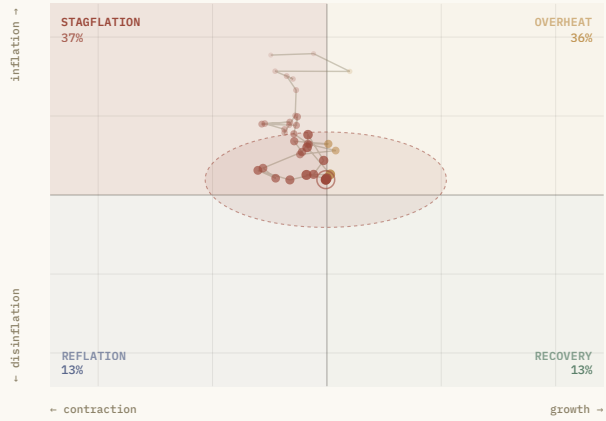

MULTIPLE	TODAY	SECTOR	PREMIUM	AT TARGET
P/E (NTM)	5.9x	12.0x	-51%	10.4x
EV/EBITDA (NTM)	3.5x	6.5x	-47%	6.0x
EV/Sales (NTM)	2.8x	3.2x	-11%	4.9x
P/B	3.6x	2.2x	+63%	6.4x
FCF yield (LTM)	8.1%	—	—	4.5%
PEG	0.98x	—	—	1.73x

5.9x NTM earnings vs a 12.0x sector reference (-51%); 3.5x EV/EBITDA vs 6.5x. At our target the P/E would be 10.4x.

RELOJ DE INVERSIÓN

2026-10 · snapshot

ESTANFLACIÓN Stagflation · weak signal

Estanflación (Stagflation), weak signal: 37% vs 36% for Sobrecalentamiento (Overheat). Gold miners has historically lagged the US market by **2.0 pp/yr** in this phase; probability-weighted tilt **-1.6 pp/yr**. The Reloj's playbook holds 6.0% in Gold miners in this phase.

INVESTMENT VIEW

what the numbers say

- **Valuation.** Fair value $54.62 vs price $32.88; 12-month target **$58.38** (+78%, +78% with dividends).
- **Fundamentals.** FY+1 revenue +25%; ROIC 31% vs WACC 7.7%; EBIT margin 50%.
- **Earnings quality.** Forward EPS is 3.2x the through-cycle average; target multiples are scaled by 0.79 for earnings durability.
- **Cycle.** Reloj reads **Stagflation** (weak signal); Gold miners has a probability-weighted tilt of **-1.6 pp/yr** vs the US market.
- **Priced in.** The market discounts year-1 growth of 15% vs our 25%: less than we model.
- **What would change our mind.** A sustained miss on FY+1 revenue or margin; a re-rating of the sector multiple; a move in the cost of equity (8.2% today).

KEY RISKS

ranked

01 Earnings are cyclically elevated: forward EPS is 3.2x the through-cycle average. A normalisation of pricing, volumes or margins would reset the earnings base the multiples are applied to.

02 Through-cycle margin and multiple are estimates; a structurally lower commodity price or cost inflation would reset the normalised earnings base.

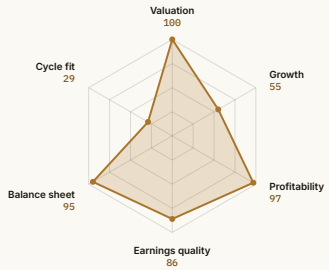

03 Estimate risk: consensus forecasts can be revised sharply, and the forward-multiple lenses move one-for-one with the earnings they are applied to.

04 Multiple risk: target multiples are anchored on sector medians; a de-rating of the peer group lowers the target regardless of company performance.

05 Single third-party data source: restatements, non-recurring items or classification differences can shift the output.

FACTOR SCORECARD

0–100

Valuation	100	Growth	55

Heuristic scales (thresholds in the appendix); the underlying metric is shown in the financial section.

INVESTMENT THESIS

Why this number

We rate **Gold Fields Limited (GFI) OVERWEIGHT** with a 12-month price target of **$58.38** — a +78% move from $32.88. The shares look undervalued on 4 lenses: Discounted cash flow (FCFF), Forward P/E, Forward EV/EBITDA, Mid-cycle normalized EV/EBITDA. Their weighted fair value today is **$54.62**, rolled forward at the 8.2% cost of equity.

Gold Fields Limited generated $8.75bn of revenue at a 50% EBIT margin in the latest fiscal year, having compounded the top line at 26.9% over the historical window. Market capitalisation stands at $29.41bn with $1.44bn of net debt.

Consensus EPS of $5.61 gives an NTM figure of $5.61, i.e. 5.9x at today's price. Because forward earnings are 3.2x what the business has earned through the cycle, we scale target multiples by 0.79 — the market pays less for peak earnings, and so do we.

For context, the Street's mean 12-month target is $54.28 (+65%). Our model-only target of $59.10 sits 9% above it; the published target gives the consensus a 15% weight, a deliberate hedge against model error that we disclose rather than hide.

A reverse DCF shows the market is discounting year-one revenue growth of 15.0% against our 25.0% base — the price demands less than we model.

Spot margins mislead at both ends of the cycle: value on mid-cycle EBITDA and through-cycle multiples, with forward multiples (scaled for earnings durability) and a mean-reverting DCF as cross-checks.

KEY DATA

Market cap	$29.41bn
Enterprise value	$30.85bn
Net debt	$1.44bn
Net debt / EBITDA	0.2x
EV / EBITDA (LTM)	4.9x

Beta	0.52
Diluted shares	894mn

THE VERDICT

How the 12-month target is built

Each lens answers *what is a share worth?* independently. They are weighted by what fits the business, filtered by plausibility guardrails, rolled forward at the cost of equity and — where it exists — lightly anchored to the Street.

RELATIVE · MULTIPLES	40% OF TARGET	INTRINSIC · CASH FLOWS	30% OF TARGET	SECTOR MODELS	30% OF TARGET
Forward P/E	$53.52	Discounted cash flow (FCFF)	$87.04	Mid-cycle normalized EV/EBITDA	$26.56
$43.88 – $63.15	15%	$79.38 – $95.62	30%	$20.72 – $32.40	30%
Forward EV/EBITDA	$50.06				
$40.71 – $59.41	25%				

FAIR VALUE TODAY

$54.62

PUBLISHED 12-MONTH TARGET

$58.38 +78%

The arithmetic. $54.62 × (1 + 8.20%) = model target **$59.10**; Street mean $54.28 at 15% weight → published **$58.38**.

Confidence: High

- 4 independent lenses agree on a valuation
- lens dispersion is moderate (CV 40%)
- model target is within 25% of the Street
- 1 data-quality / earnings-quality flag(s)

Guardrails & disclosures

Target anchored 15% to the Street consensus ($54.28); model-only target $59.10.

Forward EPS is 3.2x the through-cycle average; target multiples are scaled by 0.79 for earnings durability.

INSIDE THE LENSES

Every input, so any number can be challenged

Relative lenses apply a target multiple to forward numbers; the DCF values the cash flows; sector lenses use the model that fits the business.

Discounted cash flow (FCFF)

INTRINSIC · 30% WEIGHT

$87.04

$79.38 – $95.62

WACC	7.71%
Terminal growth	2.50%
PV of explicit FCFF	$32.72bn
PV of terminal value	$46.81bn (59% of EV)
Enterprise value	$79.53bn
– Net debt & minorities	$1.68bn
Equity value	$77.85bn
Value per share	$87.04

10-year FCFF DCF: consensus for the near years, geometric growth decay, mean-reverting margins, terminal reinvestment tied to growth/ROIC. Range = bear/bull scenarios.

Forward P/E

RELATIVE · 15% WEIGHT

$53.52

$43.88 – $63.15

Consensus EPS	$5.61 (FY2026)
Forward EPS	$5.61
Anchor P/E	12.0x — Precious metals reference 12.0x (no usable peer set)
Growth adjustment	×1.00 (6.0% durable growth vs 6.0% sector)
Earnings-durability factor	×0.79 (forward EPS far above through-cycle)
Leverage adjustment	×1.00
Target P/E	9.5x
Value per share	$53.52

Target multiple x NTM EPS. The multiple is anchored on peers/sector, then scaled for durable growth, leverage and how far forward earnings sit above what the business has historically earned.

Forward EV/EBITDA

RELATIVE · 25% WEIGHT

$50.06

$40.71 – $59.41

NTM EBITDA (from consensus earnings)	$8.99bn
Anchor EV/EBITDA	6.5x — Precious metals reference 6.5x (no usable peer set)
Growth adjustment	×1.00
Earnings-durability factor	×0.79
Target EV/EBITDA	5.2x
Enterprise value	$46.46bn
– Net debt	$1.44bn
Value per share	$50.06

Capital-structure-neutral cross-check to forward P/E: it values the operating business and then bridges to equity through net debt.

Mid-cycle normalized EV/EBITDA SECTOR

30% WEIGHT

$26.56

$20.72 – $32.40

Through-cycle EBIT margin	39.2%
Spot EBIT margin	50.3%
Normalized EBITDA	$4.35bn
EV/EBITDA multiple	5.9x (through-cycle default)
Enterprise value	$25.44bn
– Net debt	$1.44bn
Value per share	$26.56

Commodity spot margins mislead at cycle peaks and troughs; this normalises to the through-cycle average margin and multiple.

FINANCIAL ANALYSIS

Statements, returns and balance-sheet quality

Reported fiscal years, with the DCF base case and consensus as shaded forecast columns. Forecast free cash flow is unlevered (FCFF).

EARNINGS QUALITY

Are the earnings the market is paying for durable?

Trailing EPS	$3.98
Consensus EPS FY2026	$5.61
Consensus EPS FY2027	—
NTM EPS used	**$5.61**
Through-cycle (historical average) EPS	$1.74
Forward ÷ through-cycle	3.2x
Durable EPS growth used	6.0%
Earnings-durability factor on multiples	×0.79
Basis	consensus (single year)

Cyclical or in an earnings inflection. commodity / capital-cycle industry.

Growth source: historical revenue CAGR (capped at 15%); capped at sector growth (cyclical). Multiples price *durable* growth, so a one-year recovery step is never extrapolated, and when forward EPS is far above what the business has historically earned the target multiple is scaled down — the market pays less for peak earnings.

DCF CROSS-CHECK

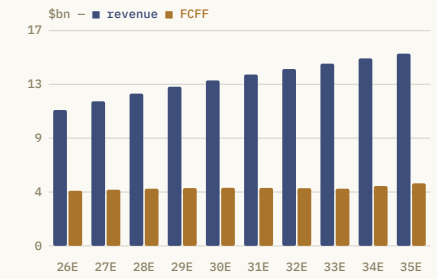

Drivers, cash-flow build and sensitivity

DRIVER	PATH	WHY
Revenue growth	25.0% → 2.5% over 10y	Year 1 follows consensus revenue for FY2026. Growth then decays geometrically from 8.0% to the 2.5% terminal rate as revenue compounds toward $15bn — competitive entry and the law of large numbers compress incremental growth; no single year's step is ever extrapolated.
EBIT margin	50.3% → 71.7% → 52.2% (expands)	Reported margin is 50.3%; year-1 margin is 71.7%. This is a cyclical business, so we revert 60% of the way toward the through-cycle average of 39.2%, landing at 52.2% — crediting some but not all of current profitability as durable.
Reinvestment (capex)	21.8% → 16.5% of sales	Starts at the historical capex intensity (21.8%) against D&A of 15.0%, converging to 1.10x D&A by the terminal year — a steady state that funds growth without permanent over- or under-investment.
Working capital	-3.6% of Δrevenue	Incremental working capital absorbs -3.6% of each year's revenue increase (historical median) — a source of cash (negative working-capital model).
Tax rate	35.0%	Normalised to the trailing effective rate of 35.0%, applied to EBIT to derive NOPAT.
Terminal growth	2.5%	At or below long-run nominal GDP (4.0%); a mature going concern cannot outgrow the economy in perpetuity. Terminal reinvestment is g/ROIC.

GOLD MINERS: EXCESS RETURN BY PHASE

pp/yr vs US market · shrunk (solid) vs raw (pale)

In Stagflation Gold miners has returned **6.1%** a year on average (**-2.0 pp/yr** vs the market, t = -0.3, reliability *no signal*). Weighted by today's probabilities the sector's expected edge is **-1.6 pp/yr**. Across all sector×phase cells the Reloj tests, 25 of 192 survive false-discovery control.

HISTORICAL EVIDENCE FOR GOLD MINERS

since 1970

PHASE	ANN.	VS MKT	T	HIT	MO.	SIGNAL
Recovery	-6.2%	-11.9	-1.9	46%	187	WEAK
Overheat	3.2%	-4.5	-0.8	52%	120	NO SIGNAL
Stagflation ●	6.1%	-2.0	-0.3	51%	225	NO SIGNAL
Reflation	36.1%	+17.2	+2.2	57%	148	MODERATE

"Ann." is the sector's average annual return while the cycle was in that phase; "vs mkt" the excess over the US market (shrunk estimate); t-statistics are Newey-West. A weak or "no signal" reliability means the data cannot distinguish the sector's phase return from chance.

RING · GDX

The company is not among the largest holdings the Reloj tracks, so the sector evidence is context rather than exposure.

Source: Reloj de inversión · snapshot as of 2026-10. This is an analytical tool, not investment advice; the sector tilt is context for the valuation, not an input to the price target.

FACTORS

What moves this stock

TYPE	FACTOR	EXPOSURE	EVIDENCE	WHY / MECHANISM
Macro	**Interest rates / discount rate**	HIGH	75bps of WACC ≈ $12.40/sh (14%); TV = 59% of EV	Long-duration cash flows: the further out the value sits (terminal-heavy), the more a shift in rates or the equity risk premium re-prices the stock, independent of operations.
Macro	**Economic cycle / demand**	HIGH	Revenue growth volatility σ = 27.7% over 3y	Historical top-line dispersion is the cleanest read on cyclicality: a stable compounding base decouples from GDP; a volatile one imports the macro cycle into earnings.
Macro	**Inflation / input costs**	LOW	−100bps EBIT margin ≈ −$1.77/sh; margin σ = 7.1%	Cost pass-through is the test: firms with pricing power hold margin through inflation; historical margin volatility shows how much of past cost shocks reached the P&L.
Macro	**Credit & refinancing**	LOW	Net debt/EBITDA = 0.2x; EBIT/interest = 36.5x	Leverage converts operating shortfalls into equity stress: the higher the stack, the more a slowdown or a repricing of debt costs flows straight to the equity holder.
Macro	**Commodity prices**	HIGH	Spot margin 50% vs through-cycle 39%	Realised prices set margins more than management does; the gap between spot and mid-cycle margin is the mean-reversion risk embedded in today's earnings.
Micro	**Competitive erosion**	LOW	ROIC−WACC spread = 2,235bps	Excess returns invite entry: the wider the spread, the bigger the prize for competitors — but also the bigger the buffer before growth stops creating value. A thin spread means small competitive slippage flips growth to value destruction.
Micro	**Execution vs expectations**	HIGH	Implied y1 growth 15.0% vs base 25.0%	Market expects LESS than our base — upside on delivery. The equity reprices on the gap between delivery and what the tape already discounts, not on absolute results.
Micro	**Capital intensity**	HIGH	Capex/D&A = 1.45x; capex = 21.8% of sales	Above 1x, the business must keep buying its own growth — FCF conversion stays hostage to the reinvestment cycle; below 1x, depreciation overstates true capital needs and cash conversion runs ahead of earnings.
Micro	**Pricing power / margin stability**	HIGH	EBIT margin σ = 7.1% (range 33%–50%)	Stable margins across cycles are the fingerprint of pricing power; wide swings say the company is a price-taker whose profitability belongs to the environment, not the franchise.

CATALYSTS

What each lever is worth

- **Cost of capital:** every 75bps of WACC moves fair value by ≈$12.40/share (14%). Rate path and the equity risk premium are the single biggest swing factor.
- **Terminal growth:** 50bps of perpetuity growth is worth ≈$4.37/share — the market's read on the company's long-run competitive position.
- **Operating margin:** each 100bps of EBIT margin across the forecast is worth ≈$1.77/share — watch pricing power, mix and cost discipline in quarterly prints.
- **Top-line delivery:** our base assumes 25.0% year-one growth fading to 2.5%; sustained beats/misses versus that glide path are the cleanest re-rating trigger either way.

RISKS

Key risks

- Earnings are cyclically elevated: forward EPS is 3.2x the through-cycle average. A normalisation of pricing, volumes or margins would reset the earnings base the multiples are applied to.
- Through-cycle margin and multiple are estimates; a structurally lower commodity price or cost inflation would reset the normalised earnings base.
- Estimate risk: consensus forecasts can be revised sharply, and the forward-multiple lenses move one-for-one with the earnings they are applied to.
- Multiple risk: target multiples are anchored on sector medians; a de-rating of the peer group lowers the target regardless of company performance.
- Single third-party data source: restatements, non-recurring items or classification differences can shift the output.

APPENDIX

Method and definitions

01

Lenses and weights

The target triangulates relative lenses (target multiples on consensus forward numbers, anchored on peers/sector references and adjusted for durable growth, leverage and earnings durability), a 10-year DCF (consensus for the near years, geometric growth decay, mean-reverting margins) and sector models, weighted by company profile.

02

Guardrails

A lens outside 0.2×–5× the price is excluded; lenses > 2.2× away from the median of the others are down-weighted by 60%; the published target is limited to 0.4×–2.5× the price; fewer than two usable lenses, or a result forced by a guardrail, is published NOT RATED.

03

12-month target

Fair value × (1 + cost of equity) − dividends; bear/bull from the lens ranges; Street consensus anchored at up to 30% (scaled by analyst count) and always shown separately.

04

Scorecard scales

Valuation: expected return −30%…+50% → 0…100. Growth: durable EPS growth 0…25% and FY+1 revenue −5…+30%. Profitability: ROIC−WACC −5…+25 pts and EBIT margin 0…35%. Quality: Piotroski share of tests passed, OCF/NI 0.5…1.2, accruals. Balance sheet: net debt/EBITDA, interest cover, Altman zone. Cycle fit: Reloj tilt −4…+4 pp/yr.

05

Piotroski · Altman · Sloan

Piotroski F: nine binary tests of profitability, leverage/liquidity and efficiency (tests that cannot be computed from the available statement lines are excluded, not failed). Altman Z (original industrial form): >2.99 safe, 1.81–2.99 grey, <1.81 distress. Sloan accruals: (net income − OCF) / average assets.
