Uranium Energy Corp. UEC

NOT RATED | CYCLICAL / COMMODITIES (MID-CYCLE MULTIPLES + DCF) | CONFIDENCE · LOW | 12-MONTH HORIZON | 13 OCT 2026

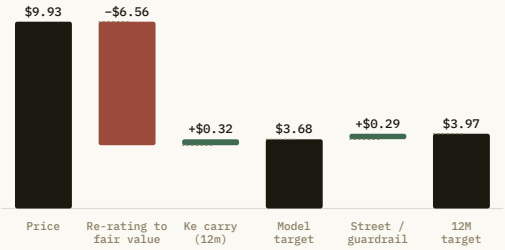

Price
$9.93
Yahoo snapshot as of 2026-07-08

12-MONTH PRICE TARGET — NOT RATED

BEAR	INDICATIVE	BULL
$3.18	$3.37	$4.73

FROM PRICE TO TARGET — not rated

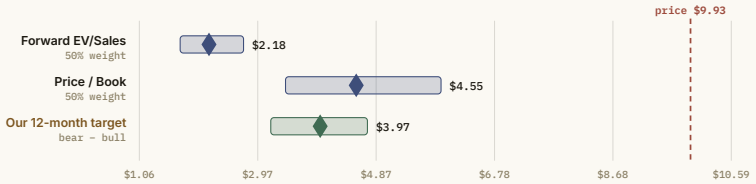

Fair value sits **$6.56 below** the price. Carrying it forward at the 9.4% cost of equity adds **$0.32**; the Street anchor / guardrail moves it $0.29 up.

KEY FIGURES — USD

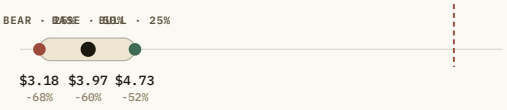

MARKET CAP $4.51bn EV $4.36bn	FCF YIELD · LTM -1.6% OCF − capex
ROIC -8.5% NOPAT / invested capital	REVENUE GROWTH · FY+1 25.0% FY2026E consensus
EBIT MARGIN -109.9% latest fiscal year	

VALUE PER SHARE BY LENS — fair value today · range

2 lenses blend to a fair value of **$3.37** (dispersion 35%). No Street consensus available.

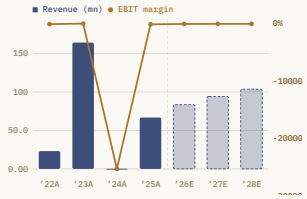

SCENARIOS · 12 MONTHS — E[target] $3.96 (-60%)

CASE	PROB.	TARGET	RETURN	DCF
Bear	25%	**$3.18**	-68%	($0.38)
Base	50%	**$3.97**	-60%	($0.35)
Bull	25%	**$4.73**	-52%	($0.32)

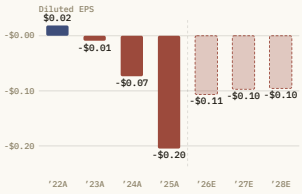

Weighting bear / base / bull 25 / 50 / 25 gives **$3.96** (-60% incl. dividends). Bear and bull come from the lens ranges (DCF bear/bull cases in the last column).

REVENUE & EBIT MARGIN — $mn

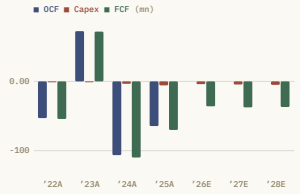

Revenue compounds **+16%** a year to FY2028E on the base case; EBIT margin -110% → -40%.

EPS · ACTUAL & EST. — USD/share

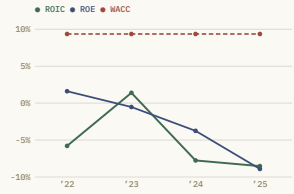

Consensus EPS ($0.11) for FY2026; NTM P/E **n/a**.

CASH GENERATION — $mn

FCF -70.2mn last year, -10.3x net income; capex intensity 1.3x D&A.

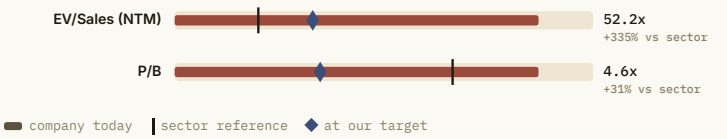

ROIC VS WACC — + ROE

ROIC **-9%** vs WACC 9.4%: returns below the cost of capital.

RELOJ DE INVERSIÓN

2026-10 · snapshot

ESTANFLACIÓN Stagflation · weak signal

Estanflación (Stagflation), weak signal: 37% vs 36% for Sobrecalentamiento (Overheat). Energy has historically lagged the US market by **5.4 pp/yr** in this phase; probability-weighted tilt **+1.2 pp/yr**. The Reloj's playbook does not hold Energy in this phase.

INVESTMENT VIEW

what the numbers say

- **Valuation.** No defensible price target: the result only exists inside the guardrail band. Indicative value $3.37.
- **Fundamentals.** FY+1 revenue +25%; ROIC -9% vs WACC 9.4%; EBIT margin -110%.
- **Quality.** Piotroski 4/9; Altman Z 21.4 (safe).
- **Cycle.** Reloj reads **Stagflation** (weak signal); Energy has a probability-weighted tilt of **+1.2 pp/yr** vs the US market.
- **What would change our mind.** A sustained miss on FY+1 revenue or margin; a re-rating of the sector multiple; a move in the cost of equity (9.4% today).

KEY RISKS

ranked

01 Through-cycle margin and multiple are estimates; a structurally lower commodity price or cost inflation would reset the normalised earnings base.

02 Low-confidence valuation: the lenses disagree or the inputs carry data-quality flags. Treat the target as indicative.

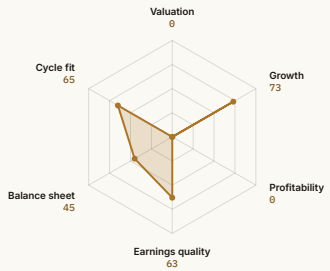

03 Estimate risk: consensus forecasts can be revised sharply, and the forward-multiple lenses move one-for-one with the earnings they are applied to.

04 Multiple risk: target multiples are anchored on sector medians; a de-rating of the peer group lowers the target regardless of company performance.

05 Single third-party data source: restatements, non-recurring items or classification differences can shift the output.

FACTOR SCORECARD

0–100

Valuation	0	Growth	73
Profitability	0	Earnings quality	63
Balance sheet	45	Cycle fit	65

Heuristic scales (thresholds in the appendix); the underlying metric is shown in the financial section.

INVESTMENT THESIS

Why this number

We do **not rate Uranium Energy Corp. (UEC)**: the result only exists inside the guardrail band. The indicative value of $3.37 per share is shown for reference only and should not be read as a call against the current price of $9.93.

Uranium Energy Corp. generated $67mn of revenue at a -110% EBIT margin in the latest fiscal year, having compounded the top line at 42.4% over the historical window. Market capitalisation stands at $4.51bn with $149mn of net cash.

Consensus EPS is negative (−$0.11), so earnings-based lenses do not apply.

Spot margins mislead at both ends of the cycle: value on mid-cycle EBITDA and through-cycle multiples, with forward multiples (scaled for earnings durability) and a mean-reverting DCF as cross-checks.

KEY DATA

Market cap	$4.51bn
Enterprise value	$4.36bn
Net debt	($149mn)
Net debt / EBITDA	net cash
EV / EBITDA (LTM)	-51.6x
P/E (LTM)	—
FCF yield (LTM)	-1.8%
Dividend yield	—
Beta	1.00
Diluted shares	454mn

THE VERDICT

How the 12-month target is built

Each lens answers *what is a share worth?* independently. They are weighted by what fits the business, filtered by plausibility guardrails, rolled forward at the cost of equity and — where it exists — lightly anchored to the Street.

RELATIVE · MULTIPLES	100% OF TARGET	SECTOR MODELS	0% OF TARGET
Forward EV/Sales $1.72 – $2.74	$2.18 50%	~~Mid-cycle normalized EV/EBITDA~~ EXCLUDED $0.48 – $0.76	$0.62 0%
Price / Book $3.41 – $5.92	$4.55 50%		

FAIR VALUE TODAY

$3.37

NOT RATED — INDICATIVE ONLY

$3.37

The arithmetic. $3.37 × (1 + 9.36%) = model target **$3.68** → published **$3.97**.

Confidence: Low

- only two lenses produced a value
- lens dispersion is moderate (CV 35%)
- a guardrail had to intervene

Guardrails & disclosures

> Mid-cycle normalized EV/EBITDA excluded (0.1x the current price is outside the 0.2x–5x plausibility band).

Target 3.68 fell outside 0.4x–2.5x the price and was limited to the band edge.

INSIDE THE LENSES

Every input, so any number can be challenged

Relative lenses apply a target multiple to forward numbers; the DCF values the cash flows; sector lenses use the model that fits the business.

Mid-cycle normalized EV/EBITDA

SECTOR · EXCLUDED

$0.62

$0.48 – $0.76 · implausible: 0.1x the current price

Through-cycle EBIT margin	5.5%
Spot EBIT margin	-109.9%
Normalized EBITDA	$0.01bn
EV/EBITDA multiple	16.2x (through-cycle default)
Enterprise value	$0.13bn
+ Net cash	$0.15bn
Value per share	$0.62

Commodity spot margins mislead at cycle peaks and troughs; this normalises to the through-cycle average margin and multiple.

Forward EV/Sales

RELATIVE · 50% WEIGHT

$2.18

$1.72 – $2.74

NTM revenue	$0.08bn (+25% vs last year)
Anchor EV/Sales	12.0x — Uranium reference 12.0x (no usable peer set)
Growth factor	×1.20
Profitability factor	×0.70 (loss-making)
Target EV/Sales	10.1x
Value per share	$2.18

For companies where earnings do not yet measure value: a sales multiple sized to growth and (lack of) profitability.

Price / Book

RELATIVE · 50% WEIGHT

$4.55

$3.41 – $5.92

Book value / share	$2.17
Anchor P/B	3.5x — Uranium reference 3.5x (no usable peer set)
Returns factor (ROE / Ke)	×0.60 (ROE -8.9%)
Target P/B	2.10x
Value per share	$4.55

Asset-based anchor for loss-making or early-stage companies: book value times a multiple scaled by returns on equity relative to the cost of equity.

FINANCIAL ANALYSIS

Statements, returns and balance-sheet quality

Reported fiscal years, with the DCF base case and consensus as shaded forecast columns. Forecast free cash flow is unlevered (FCFF).

EARNINGS QUALITY

Are the earnings the market is paying for durable?

Trailing EPS	($0.20)
Consensus EPS FY2026	($0.11)
Consensus EPS FY2027	—
NTM EPS used	**($0.11)**
Through-cycle (historical average) EPS	($0.07)
Forward ÷ through-cycle	—
Durable EPS growth used	15.0%
Earnings-durability factor on multiples	×1.00
Basis	consensus (single year)

Cyclical or in an earnings inflection. revenue fell 100% in a single year; EBIT margin has swung 115pts peak-to-trough; commodity / capital-cycle industry.

Growth source: historical revenue CAGR (capped at 15%); capped at sector growth (cyclical). Multiples price *durable* growth, so a one-year recovery step is never extrapolated, and when forward EPS is far above what the business has historically earned the target multiple is scaled down — the market pays less for peak earnings.

DCF CROSS-CHECK

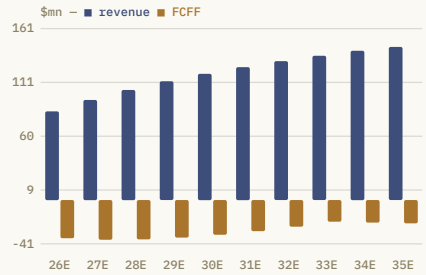

Drivers, cash-flow build and sensitivity

DRIVER	PATH	WHY
Revenue growth	25.0% → 2.5% over 10y	Year 1 follows consensus revenue for FY2026. Growth then decays geometrically from 17.0% to the 2.5% terminal rate as revenue compounds toward $0bn — competitive entry and the law of large numbers compress incremental growth; no single year's step is ever extrapolated.
EBIT margin	-109.9% → -50.0% → -16.7% (expands)	Reported margin is -109.9%; year-1 margin is -50.0%. This is a cyclical business, so we revert 60% of the way toward the through-cycle average of 5.5%, landing at -16.7% — crediting some but not all of current profitability as durable.
Reinvestment (capex)	4.7% → 5.1% of sales	Starts at the historical capex intensity (4.7%) against D&A of 4.6%, converging to 1.10x D&A by the terminal year — a steady state that funds growth without permanent over- or under-investment.
Working capital	-10.0% of Δrevenue	Incremental working capital absorbs -10.0% of each year's revenue increase (historical median) — a source of cash (negative working-capital model).
Tax rate	10.0%	Normalised to the trailing effective rate of 10.0%, applied to EBIT to derive NOPAT.
Terminal growth	2.5%	At or below long-run nominal GDP (4.0%); a mature going concern cannot outgrow the economy in perpetuity. Terminal reinvestment is g/ROIC.

RELOJ DE INVERSIÓN

Where the cycle is, and what it has paid Energy

Live reading of the Reloj de inversión project: 28 FRED series → growth and inflation axes (robust z-scores, PCA) → phase probabilities. Sector evidence is historical excess return vs the US market per phase, with Newey-West t-statistics and false-discovery control.

GROWTH × INFLATION PLANE

last 36 months

PHASE PROBABILITIES

weak signal · margin 1.1 pts

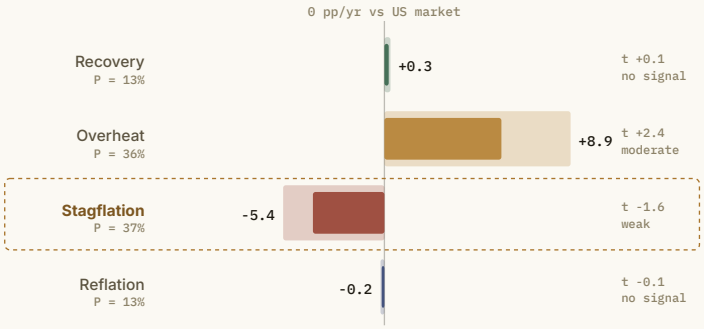

Recovery	13%
Overheat	36%
Stagflation	**37%**
Reflation	13%

The Reloj's call is **Estanflación** with **weak** conviction: only 1.1 points separate it from Sobrecalentamiento (Overheat). Growth sits at -0.01σ and inflation at +0.19σ of their ten-year norms; the 12-month recession probability is 8%.

GROWTH Z -0.01σ	INFLATION Z +0.19σ
RECESSION 12M 8%	GROWTH Δ3M -0.04σ
INFLATION Δ3M -0.07σ	DATA snapshot

ENERGY: EXCESS RETURN BY PHASE

pp/yr vs US market · shrunk (solid) vs raw (pale)

In Stagflation Energy has returned **1.1%** a year on average (**-5.4 pp/yr** vs the market, t = -1.6, reliability *weak*). Weighted by today's probabilities the sector's expected edge is **+1.2 pp/yr**. Across all sector×phase cells the Reloj tests, 25 of 192 survive false-discovery control.

HISTORICAL EVIDENCE FOR ENERGY

since 1970

PHASE	ANN.	VS MKT	T	HIT	MO.	SIGNAL
Recovery	9.3%	+0.3	+0.1	58%	187	NO SIGNAL
Overheat	23.0%	+8.9	+2.4	63%	120	MODERATE
Stagflation ●	1.1%	-5.4	-1.6	49%	226	WEAK
Reflation	8.6%	-0.2	-0.1	55%	148	NO SIGNAL

"Ann." is the sector's average annual return while the cycle was in that phase; "vs mkt" the excess over the US market (shrunk estimate); t-statistics are Newey-West. A weak or "no signal" reliability means the data cannot distinguish the sector's phase return from chance.

THE RELOJ'S PLAYBOOK NOW

Estanflación · Inverse volatility

ALLOCATION	WEIGHT
Industrials	26.0%
Semiconductors	22.2%
Utilities	31.8%
Gold miners	6.0%
Gold bullion	14.0%

Energy is **not in** the Reloj's playbook for Stagflation, but would hold 23.8% if the cycle tips to Overheat.

HOW TO USE THE ETF

09-Oct-2026

ETFS

IYE · XLE

The company is not among the largest holdings the Reloj tracks, so the sector evidence is context rather than exposure.

Source: Reloj de inversión · snapshot as of 2026-10. This is an analytical tool, not investment advice; the sector tilt is context for the valuation, not an input to the price target.

FACTORS

What moves this stock

TYPE	FACTOR	EXPOSURE	EVIDENCE	WHY / MECHANISM
Macro	**Interest rates / discount rate**	LOW	75bps of WACC ≈ $0.04/sh (-13%); TV = 33% of EV	Long-duration cash flows: the further out the value sits (terminal-heavy), the more a shift in rates or the equity risk premium re-prices the stock, independent of operations.
Macro	**Economic cycle / demand**	HIGH	Revenue growth volatility σ = 354.8% over 2y	Historical top-line dispersion is the cleanest read on cyclicality: a stable compounding base decouples from GDP; a volatile one imports the macro cycle into earnings.
Macro	**Inflation / input costs**	LOW	−100bps EBIT margin ≈ −$0.03/sh; margin σ = 10905.4%	Cost pass-through is the test: firms with pricing power hold margin through inflation; historical margin volatility shows how much of past cost shocks reached the P&L.
Macro	**Credit & refinancing**	LOW	Net cash position; EBIT/interest = -50.8x	A net-cash balance sheet removes refinancing risk and turns higher rates into interest income rather than a cost.
Macro	**Commodity prices**	HIGH	Spot margin -110% vs through-cycle 6%	Realised prices set margins more than management does; the gap between spot and mid-cycle margin is the mean-reversion risk embedded in today's earnings.
Micro	**Competitive erosion**	HIGH	ROIC−WACC spread = -1,056bps	Excess returns invite entry: the wider the spread, the bigger the prize for competitors — but also the bigger the buffer before growth stops creating value. A thin spread means small competitive slippage flips growth to value destruction.
Micro	**Capital intensity**	LOW	Capex/D&A = 1.02x; capex = 4.7% of sales	Above 1x, the business must keep buying its own growth — FCF conversion stays hostage to the reinvestment cycle; below 1x, depreciation overstates true capital needs and cash conversion runs ahead of earnings.
Micro	**Pricing power / margin stability**	HIGH	EBIT margin σ = 10905.4% (range -25247%–6%)	Stable margins across cycles are the fingerprint of pricing power; wide swings say the company is a price-taker whose profitability belongs to the environment, not the franchise.

CATALYSTS

What each lever is worth

- **Cost of capital:** every 75bps of WACC moves fair value by ≈$0.04/share (-13%). Rate path and the equity risk premium are the single biggest swing factor.
- **Terminal growth:** 50bps of perpetuity growth is worth ≈$0.00/share — the market's read on the company's long-run competitive position.
- **Operating margin:** each 100bps of EBIT margin across the forecast is worth ≈$0.03/share — watch pricing power, mix and cost discipline in quarterly prints.
- **Top-line delivery:** our base assumes 25.0% year-one growth fading to 2.5%; sustained beats/misses versus that glide path are the cleanest re-rating trigger either way.

RISKS

Key risks

- Through-cycle margin and multiple are estimates; a structurally lower commodity price or cost inflation would reset the normalised earnings base.
- Low-confidence valuation: the lenses disagree or the inputs carry data-quality flags. Treat the target as indicative.
- Estimate risk: consensus forecasts can be revised sharply, and the forward-multiple lenses move one-for-one with the earnings they are applied to.
- Multiple risk: target multiples are anchored on sector medians; a de-rating of the peer group lowers the target regardless of company performance.
- Single third-party data source: restatements, non-recurring items or classification differences can shift the output.

APPENDIX

Method and definitions

01

02

03

Lenses and weights

The target triangulates relative lenses (target multiples on consensus forward numbers, anchored on peers/sector references and adjusted for durable growth, leverage and earnings durability), a 10-year DCF (consensus for the near years, geometric growth decay, mean-reverting margins) and sector models, weighted by company profile.

Guardrails

A lens outside 0.2×–5× the price is excluded; lenses > 2.2× away from the median of the others are down-weighted by 60%; the published target is limited to 0.4×–2.5× the price; fewer than two usable lenses, or a result forced by a guardrail, is published NOT RATED.

12-month target

Fair value × (1 + cost of equity) − dividends; bear/bull from the lens ranges; Street consensus anchored at up to 30% (scaled by analyst count) and always shown separately.

04

Scorecard scales

Valuation: expected return −30%…+50% → 0…100. Growth: durable EPS growth 0…25% and FY+1 revenue −5…+30%. Profitability: ROIC−WACC −5…+25 pts and EBIT margin 0…35%. Quality: Piotroski share of tests passed, OCF/NI 0.5…1.2, accruals. Balance sheet: net debt/EBITDA, interest cover, Altman zone. Cycle fit: Reloj tilt −4…+4 pp/yr.

05

Piotroski · Altman · Sloan

Piotroski F: nine binary tests of profitability, leverage/liquidity and efficiency (tests that cannot be computed from the available statement lines are excluded, not failed). Altman Z (original industrial form): >2.99 safe, 1.81–2.99 grey, <1.81 distress. Sloan accruals: (net income − OCF) / average assets.

06

Reloj de inversión

Phase probabilities and sector evidence come from the linked project's published data (see source above). Tilt = Σ phase probability × shrunk excess return of the sector in that phase. It describes historical behaviour and is not an input to the price target.

Disclaimer. Generated by an automated, sector-aware valuation engine from public data (Yahoo snapshot as of 2026-07-08). UEC was classified as **Cyclical / Commodities (mid-cycle multiples + DCF)**. Forward numbers come from analyst consensus where available and from reported figures otherwise; they are not a substitute for fundamental judgement.
