# Micron Technology, Inc. MU

**OVERWEIGHT · 12M target $1,264.83 (+33%)**

13 Oct 2026 · 12-month horizon · Standard (forward multiples + DCF) · confidence Medium

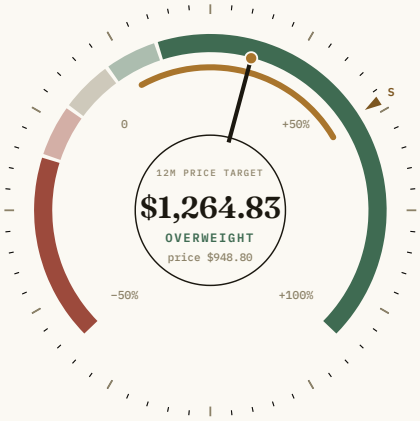

We rate **Micron Technology, Inc. (MU) OVERWEIGHT** with a 12-month price target of **$1,264.83** — a +33% move from $948.80 and a +33% total return including the dividend. The shares look undervalued on 3 lenses: Discounted cash flow (FCFF), Forward P/E, Forward EV/EBITDA. Their weighted fair value today is **$1,100.96**, rolled forward at the 11.4% cost of equity.

| | | |
|---|---|---|
| **Discounted cash flow (FCFF)** | | 20% |
| Forward P/E | | 43% |
| Forward EV/EBITDA | | 36% |

> Lens weights after guardrails. 3 independent lenses agree on a valuation; lens dispersion is moderate (CV 36%); model target is within 25% of the Street; 2 data-quality / earnings-quality flag(s).

**Expected return · 12 months** needle = total return

The arc is the bear–bull range of the target; the marker **S** is the Street consensus.

INVESTMENT THESIS

# Why this number

Micron Technology, Inc. generated $37.38bn of revenue at a 26% EBIT margin in the latest fiscal year, having compounded the top line at 6.7% over the historical window. Market capitalisation stands at $1.07trn with $4.97bn of net debt.

Consensus EPS of $73.32 and $149.64 gives an NTM figure of $111.48, i.e. 8.5x at today's price. Because forward earnings are 20.0x what the business has earned through the cycle, we scale target multiples by 0.60 — the market pays less for peak earnings, and so do we.

For context, the Street's mean 12-month target is $1,486.00 (+57%). Our model-only target of $1,225.80 sits 18% below it; the published target gives the consensus a 15% weight, a deliberate hedge against model error that we disclose rather than hide.

A reverse DCF shows the market is discounting year-one revenue growth of 257.7% against our 246.7% base — the price already discounts more than we model.

Priced like the sell-side prices it: a target multiple on forward earnings and EBITDA (peer-anchored, adjusted for growth and earnings durability), cross-checked against a 10-year FCFF DCF whose growth decays and whose margins mean-revert.

— THE VERDICT

# How the 12-month target is built

Each lens answers *what is a share worth?* independently. They are weighted by what fits the business, filtered by plausibility guardrails, rolled forward at the cost of equity and — where it exists — lightly anchored to the Street.

| RELATIVE · MULTIPLES | 80% OF TARGET |
|---|---|
| Forward P/E<br>$1,041.12 – $1,498.20 | $1,269.66<br>43% |
| Forward EV/EBITDA<br>$1,016.28 – $1,464.39 | $1,240.33<br>36% |

| INTRINSIC · CASH FLOWS | 20% OF TARGET |
|---|---|
| Discounted cash flow (FCFF)<br>DOWN-WEIGHTED<br>$411.26 – $582.47 | $490.59<br>20% |

FAIR VALUE TODAY

**$1,100.96**

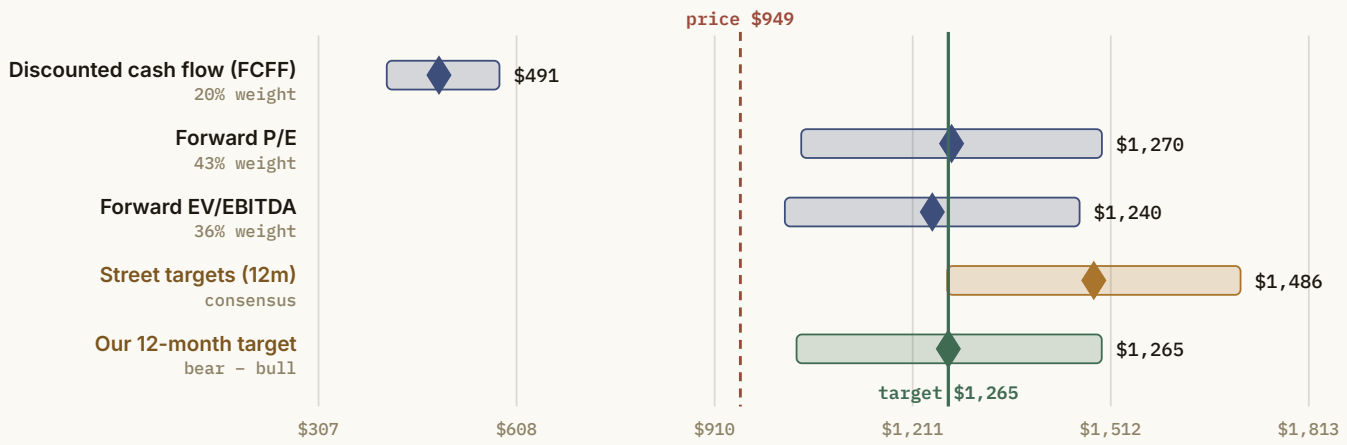

PUBLISHED 12-MONTH TARGET

**$1,264.83** +33%

**The arithmetic.** $1,100.96 × (1 + 11.38%) − $0.46 dividends = model target **$1,225.80**; Street mean $1,486.00 at 15% weight → published **$1,264.83**.

EXHIBIT 1

# Value per share by lens, against price, the Street and our target

## Confidence: Medium

- 3 independent lenses agree on a valuation
- lens dispersion is moderate (CV 36%)
- model target is within 25% of the Street
- 2 data-quality / earnings-quality flag(s)

## Guardrails & disclosures

Discounted cash flow (FCFF) sits 0.4x the lens median and was down-weighted by 60%.

Target anchored 15% to the Street consensus ($1,486.00); model-only target $1,225.80.

Forward EPS is 14.7x trailing: earnings are in a steep inflection and carry high forecast risk.

Forward EPS is 20.0x the through-cycle average; target multiples are scaled by 0.60 for earnings durability.

POR DENTRO · INSIDE

# The lenses in detail

Relative lenses apply a target multiple to forward numbers; the DCF values the cash flows; sector lenses use the model that fits the business. Every input is

shown so any number can be challenged.

### Discounted cash flow (FCFF)

ADJUSTED

INTRINSIC

# $490.59

$411.26 – $582.47 · down-weighted: 0.4x the median of the other lenses

| | |
|---|---|
| WACC | 11.28% |
| Terminal growth | 2.50% |
| PV of explicit FCFF | $335.60bn |
| PV of terminal value | $223.43bn (40% of EV) |
| Enterprise value | $559.04bn |
| – Net debt & minorities | $4.97bn |
| Equity value | $554.07bn |
| Value per share | $490.59 |

10-year FCFF DCF: consensus for the near years, geometric growth decay, mean-reverting margins, terminal reinvestment tied to growth/ROIC. Range = bear/bull scenarios.

### Forward P/E

RELATIVE

43% WEIGHT

# $1,269.66

$1,041.12 – $1,498.20

| | |
|---|---|
| Consensus EPS | $73.32 (FY2026) / $149.64 (FY2027) |
| NTM EPS (blend of the two years) | $111.48 |
| Anchor P/E | 21.0x — Semiconductors reference 21.0x (no usable peer set) |
| Growth adjustment | ×0.90 (8.6% durable growth vs 12.0% sector) |
| Earnings-durability factor | ×0.60 (forward EPS far above through-cycle) |
| Leverage adjustment | ×1.00 |
| Target P/E | 11.4x |
| Value per share | $1,269.66 |

Target multiple x NTM EPS. The multiple is anchored on peers/sector, then scaled for durable growth, leverage and how far forward earnings sit above what the business has historically earned.

### Forward EV/EBITDA RELATIVE 36% WEIGHT

**$1,240.33**

$1,016.28 – $1,464.39

| | |
|---|---|
| NTM EBITDA (from consensus earnings) | $172.81bn |
| Anchor EV/EBITDA | 15.0x — Semiconductors reference 15.0x (no usable peer set) |
| Growth adjustment | ×0.90 |
| Earnings-durability factor | ×0.60 |
| Target EV/EBITDA | 8.1x |
| Enterprise value | $1,405.80bn |
| – Net debt | $4.97bn |
| Value per share | $1,240.33 |

Capital-structure-neutral cross-check to forward P/E: it values the operating business and then bridges to equity through net debt.

CALIDAD DE BENEFICIOS · EARNINGS QUALITY

## Are the earnings the market is paying for durable?

| | |
|---|---|
| Trailing EPS | $7.59 |
| Consensus EPS FY2026 | $73.32 |
| Consensus EPS FY2027 | $149.64 |
| NTM EPS used | **$111.48** |
| Through-cycle (historical average) EPS | $2.67 |
| Forward ÷ through-cycle | 20.0x |

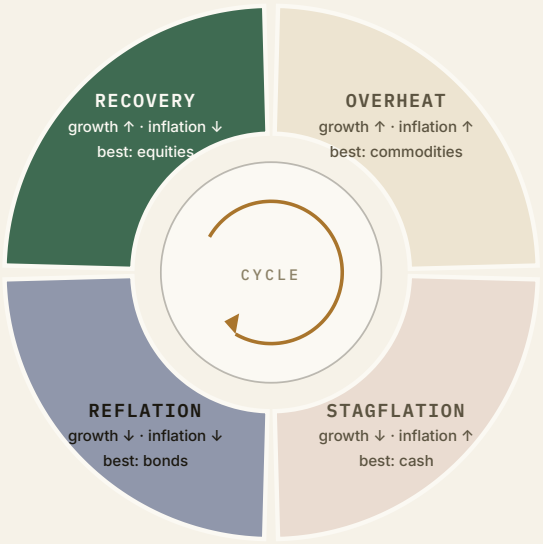

| | |
|---|---|
| Durable EPS growth used | 8.6% |
| Earnings-durability factor on multiples | ×0.60 |
| Basis | consensus |

**Cyclical or in an earnings inflection.** revenue fell 49% in a single year; EBIT margin has swung 66pts peak-to-trough.

Growth source: historical revenue CAGR (capped at 15%); capped at sector growth (cyclical). Multiples price *durable* growth, so a one-year recovery step is never extrapolated, and when forward EPS is far above what the business has historically earned the target multiple is scaled down — the market pays less for peak earnings.

— RELOJ DE INVERSIÓN · INVESTMENT CLOCK

## Where it sits on the cycle

**Recovery** and **Reflation** are the phases in which Technology has historically led, on the classic Merrill Lynch Investment Clock sector map (growth × inflation, rotating clockwise: Recovery → Overheat → Stagflation → Reflation).

Illustrative sector affinity, not a call on where the economy is today: this tool reads company fundamentals and consensus, not macro data. Use it to ask whether the thesis above needs the cycle to cooperate. The live phase reading lives in the Reloj de inversión project.

FINANCIAL SUMMARY

## Multiples at the current price

| $, PER SHARE WHERE NOTED | FY2024A | FY2025A | FY2026E | FY2027E | FY2028E | FY2029E |
|---|---|---|---|---|---|---|
| Revenue | $25.11bn | $37.38bn | $129.59bn | $234.24bn | $258.62bn | $279.15bn |

| 2028E | $258.62bn | +10.4% | $112.03bn | 43.3% | $90.25bn | $79.91 |
| 2029E | $279.15bn | +7.9% | $109.68bn | 39.3% | $88.35bn | $78.22 |

| FISCAL YEAR | REVENUE | GROWTH | EBIT | MARGIN | NET INCOME | EPS |
|---|---|---|---|---|---|---|
| 2030E | $296.57bn | +6.2% | $104.57bn | 35.3% | $84.22bn | $74.57 |
| 2031E | $311.61bn | +5.1% | $97.32bn | 31.2% | $78.35bn | $69.37 |
| 2032E | $324.91bn | +4.3% | $88.38bn | 27.2% | $71.12bn | $62.97 |
| 2033E | $336.98bn | +3.7% | $78.09bn | 23.2% | $62.79bn | $55.60 |
| 2034E | $348.22bn | +3.3% | $80.69bn | 23.2% | $64.90bn | $57.46 |
| 2035E | $356.93bn | +2.5% | $82.71bn | 23.2% | $66.53bn | $58.91 |

“A” marks figures taken directly from analyst consensus; other forecast rows are the DCF base case with flat interest and the normalised tax rate.

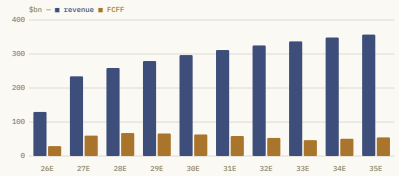

DCF

## Cross-check — drivers and sensitivity

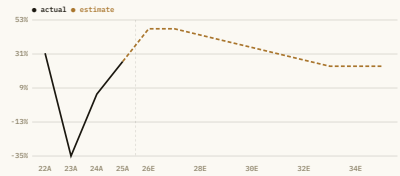

| DRIVER | PATH | WHY |
|---|---|---|
| **Revenue growth** | 246.7% → 2.5% over 10y | Years 1–2 follow consensus revenue for FY2026 and FY2027. Growth then decays geometrically from 14.0% to the 2.5% terminal rate as revenue compounds toward $357bn — competitive entry and the law of large numbers compress incremental growth; no single year's step is ever extrapolated. |
| **EBIT margin** | 26.2% → 47.3% → 23.2% (compresses) | Reported margin is 26.2%; year-1 margin is 47.3% (consensus implies 79%; capped at 47%, 1.5x the highest margin ever reported). This is a cyclical business, so we revert 60% of the way toward the through-cycle average of 7.1%, landing at 23.2% — crediting some but not all of current profitability as durable. |
| **Reinvestment (capex)** | 41.1% → 34.8% of sales | Starts at the historical capex intensity (41.1%) against D&A of 31.6%, converging to 1.10x D&A by the terminal year — a steady state that funds growth without permanent over- or under-investment. |
| **Working capital** | 8.8% of Δrevenue | Incremental working capital absorbs 8.8% of each year's revenue increase (historical median) — a cash drag as the business scales. |
| **Tax rate** | 19.1% | Normalised to the trailing effective rate of 19.1%, applied to EBIT to derive NOPAT. |

| DRIVER | PATH | WHY |
|---|---|---|
| **Terminal growth** | 2.5% | At or below long-run nominal GDP (4.0%); a mature going concern cannot outgrow the economy in perpetuity. Terminal reinvestment is g/ROIC. |

REVENUE & FCFF

EBIT MARGIN PATH

EV → EQUITY BRIDGE

DCF VALUE PER SHARE · WACC × TERMINAL GROWTH (VS. PRICE)

| WACC \ G | 1.5% | 2.0% | 2.5% | 3.0% | 3.5% |
|---|---|---|---|---|---|
| **9.8%** | $572 | $577 | $582 | $588 | $594 |
| **10.5%** | $526 | $529 | $532 | $535 | $539 |
| **11.3%** | $487 | $489 | **$491** | $492 | $494 |
| **12.0%** | $454 | $455 | $456 | $457 | $458 |
| **12.8%** | $427 | $427 | $428 | $429 | $430 |

Shaded against the current price: green = above, terracotta = below. Outlined cell = base case.

The business earns **11.8%** on capital versus a **11.3%** cost of capital — a positive spread of **57bps**, so growth creates value. Self-funding growth of 2.5% (reinvestment 21% × ROIC) frames how much of the terminal growth is organically financed rather than assumed.

### Model diagnostics

| | | |
|---|---|---|
| Terminal EV/EBITDA vs today | 3.2x implied vs 59.3x current | OK |
| Terminal ROIC vs WACC | 11.8% vs 11.3% | OK |

FACTORES

## What moves this stock

| TYPE | FACTOR | EXPOSURE | EVIDENCE | WHY / MECHANISM |
|---|---|---|---|---|
| Macro | **Interest rates / discount rate** | MEDIUM | 75bps of WACC ≈ $38.03/sh (8%); TV = 40% of EV | Long-duration cash flows: the further out the value sits (terminal-heavy), the more a shift in rates or the equity risk premium re-prices the stock, independent of operations. |
| Macro | **Economic cycle / demand** | HIGH | Revenue growth volatility σ = 49.6% over 3y | Historical top-line dispersion is the cleanest read on cyclicality: a stable compounding base decouples from GDP; a volatile one imports the macro cycle into earnings. |
| Macro | **Inflation / input costs** | MEDIUM | −100bps EBIT margin ≈ −$22.65/sh; margin σ = 26.1% | Cost pass-through is the test: firms with pricing power hold margin through inflation; historical margin volatility shows how much of past cost shocks reached the P&L. |
| Macro | **Credit & refinancing** | LOW | Net debt/EBITDA = 0.3x; EBIT/interest = 20.6x | Leverage converts operating shortfalls into equity stress: the higher the stack, the more a slowdown or a repricing of debt costs flows straight to the equity holder. |
| Micro | **Competitive erosion** | HIGH | ROIC−WACC spread = 57bps | Excess returns invite entry: the wider the spread, the bigger the prize for competitors — but also the bigger the buffer before growth stops creating value. A thin spread means small competitive slippage flips growth to value destruction. |

| TYPE | FACTOR | EXPOSURE | EVIDENCE | WHY / MECHANISM |
|---|---|---|---|---|
| Micro | **Execution vs expectations** | HIGH | Implied y1 growth 257.7% vs base 246.7% | Market expects MORE than our base — priced for execution. The equity reprices on the gap between delivery and what the tape already discounts, not on absolute results. |
| Micro | **Capital intensity** | MEDIUM | Capex/D&A = 1.30x; capex = 41.1% of sales | Above 1x, the business must keep buying its own growth — FCF conversion stays hostage to the reinvestment cycle; below 1x, depreciation overstates true capital needs and cash conversion runs ahead of earnings. |
| Micro | **Pricing power / margin stability** | HIGH | EBIT margin σ = 26.1% (range -35%–32%) | Stable margins across cycles are the fingerprint of pricing power; wide swings say the company is a price-taker whose profitability belongs to the environment, not the franchise. |

CATALIZADORES

## What each lever is worth

- **Cost of capital:** every 75bps of WACC moves fair value by ≈$38.03/share (8%). Rate path and the equity risk premium are the single biggest swing factor.
- **Terminal growth:** 50bps of perpetuity growth is worth ≈$1.66/share — the market's read on the company's long-run competitive position.
- **Operating margin:** each 100bps of EBIT margin across the forecast is worth ≈$22.65/share — watch pricing power, mix and cost discipline in quarterly prints.
- **Top-line delivery:** our base assumes 246.7% year-one growth fading to 2.5%; sustained beats/misses versus that glide path are the cleanest re-rating trigger either way.

RIESGOS

## Key risks

- Earnings are cyclically elevated: forward EPS is 20.0x the through-cycle average. A normalisation of pricing, volumes or margins would reset the earnings base the multiples are applied to.
- Estimate risk: consensus forecasts can be revised sharply, and the forward-multiple lenses move one-for-one with the earnings they are applied to.
- Multiple risk: target multiples are anchored on sector medians; a de-rating of the peer group lowers the target regardless of company performance.
- Single third-party data source: restatements, non-recurring items or classification differences can shift the output.

**Methodology & disclaimer.** Generated by an automated, sector-aware valuation engine from public data (Yahoo snapshot as of 2026-07-09). MU was classified as **Standard (forward multiples + DCF)**. The 12-month price target triangulates several lenses — target multiples on consensus forward earnings (peer/sector-anchored and adjusted for durable growth, leverage and earnings durability), a 10-year DCF with decaying growth and mean-reverting margins, and sector-specific models — weights them by profile, applies plausibility guardrails, rolls the result forward at the cost of equity net of dividends, and lightly anchors it to Street consensus when available. Reference multiples are long-run developed-market medians; live peer medians replace them when fetched. Forward numbers come from analyst consensus where available and from reported figures otherwise; they are not a substitute for fundamental judgement. Nothing here is investment advice, a recommendation, or an offer to transact. Do your own due diligence.
