Sandisk Corporation SNDK

UNDERWEIGHT · 12M target $1,343.66 (-22%)

13 Oct 2026 · 12-month horizon · Standard (forward multiples + DCF) · confidence Medium

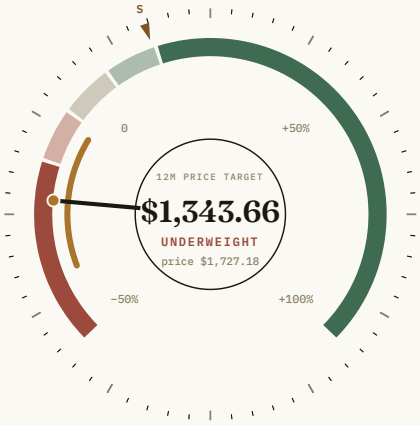

We rate **Sandisk Corporation (SNDK) UNDERWEIGHT** with a 12-month price target of **$1,343.66** — a -22% move from $1,727.18. The shares look overvalued on 3 lenses: Discounted cash flow (FCFF), Forward P/E, Forward EV/EBITDA. Their weighted fair value today is **$1,126.32**, rolled forward at the 9.4% cost of equity.

Discounted cash flow (FCFF)		20%
Forward P/E		43%
Forward EV/EBITDA		36%

> Lens weights after guardrails. 3 independent lenses agree on a valuation; lens dispersion is moderate (CV 37%); 1 data-quality / earnings-quality flag(s).

Expected return · 12 months needle = total return

The arc is the bear–bull range of the target; the marker **S** is the Street consensus.

INVESTMENT THESIS

Why this number

Sandisk Corporation generated $7.36bn of revenue at a 7% EBIT margin in the latest fiscal year, having compounded the top line at 9.9% over the historical window. Market capitalisation stands at $255.78bn with $561mn of net debt.

Consensus EPS of $66.41 and $204.47 gives an NTM figure of $135.44, i.e. 12.8x at today's price. Because forward earnings are 20.0x what the business has earned through the cycle, we scale target multiples by 0.60 — the market pays less for peak earnings, and so do we.

For context, the Street's mean 12-month target is $1,975.95 (+14%). Our model-only target of $1,232.08 sits 38% below it; the published target gives the consensus a 15% weight, a deliberate hedge against model error that we disclose rather than hide.

A reverse DCF shows the market is discounting year-one revenue growth of 184.3% against our 168.8% base — the price already discounts more than we model.

Priced like the sell-side prices it: a target multiple on forward earnings and EBITDA (peer-anchored, adjusted for growth and earnings durability), cross-checked against a 10-year FCFF DCF whose growth decays and whose margins mean-revert.

— THE VERDICT

How the 12-month target is built

Each lens answers *what is a share worth?* independently. They are weighted by what fits the business, filtered by plausibility guardrails, rolled forward at the cost of equity and — where it exists — lightly anchored to the Street.

RELATIVE · MULTIPLES	80% OF TARGET	INTRINSIC · CASH FLOWS	20% OF TARGET
Forward P/E $1,138.01 – $1,637.63	$1,387.82 43%	Discounted cash flow (FCFF) DOWN-WEIGHTED $399.78 – $609.10	$497.03 20%
Forward EV/EBITDA $954.55 – $1,375.28	$1,164.91 36%		

FAIR VALUE TODAY

$1,126.32

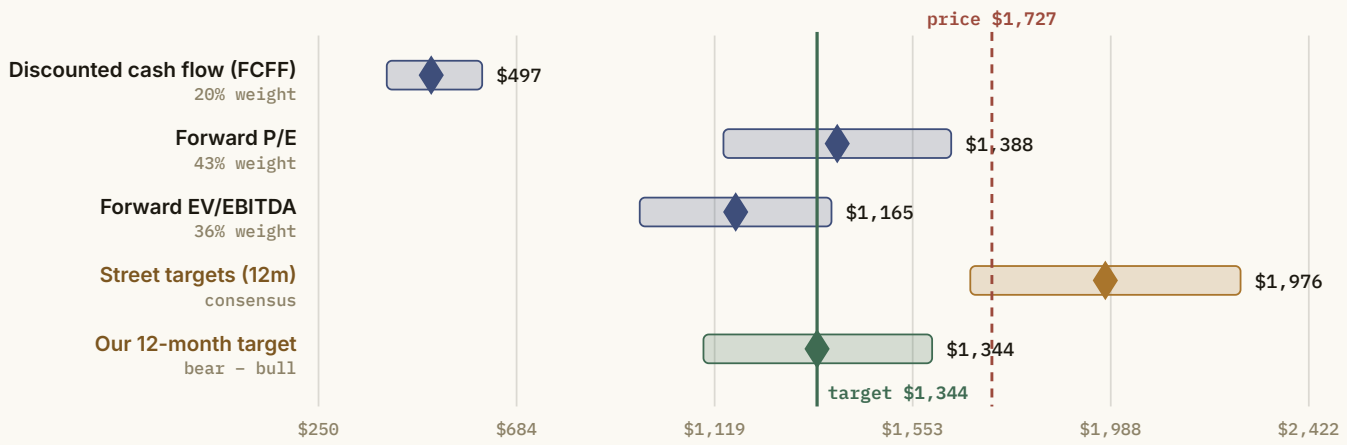

PUBLISHED 12-MONTH TARGET

$1,343.66 -22%

The arithmetic. $1,126.32 × (1 + 9.39%) = model target **$1,232.08**; Street mean $1,975.95 at 15% weight → published **$1,343.66**.

EXHIBIT 1

Value per share by lens, against price, the Street and our target

Confidence: Medium

- 3 independent lenses agree on a valuation
- lens dispersion is moderate (CV 37%)
- 1 data-quality / earnings-quality flag(s)

Guardrails & disclosures

> Discounted cash flow (FCFF) sits 0.4x the lens median and was down-weighted by 60%.

> Target anchored 15% to the Street consensus ($1,975.95); model-only target $1,232.08.

> Forward EPS is 20.0x the through-cycle average; target multiples are scaled by 0.60 for earnings durability.

POR DENTRO · INSIDE

The lenses in detail

Relative lenses apply a target multiple to forward numbers; the DCF values the cash flows; sector lenses use the model that fits the business. Every input is

shown so any number can be challenged.

Discounted cash flow (FCFF)

ADJUSTED

INTRINSIC

$497.03

$399.78 – $609.10 · down-weighted: 0.4x the median of the other lenses

WACC	9.35%
Terminal growth	2.50%
PV of explicit FCFF	$50.30bn
PV of terminal value	$23.86bn (32% of EV)
Enterprise value	$74.17bn
– Net debt & minorities	$0.56bn
Equity value	$73.61bn
Value per share	$497.03

10-year FCFF DCF: consensus for the near years, geometric growth decay, mean-reverting margins, terminal reinvestment tied to growth/ROIC. Range = bear/bull scenarios.

Forward P/E

RELATIVE

43% WEIGHT

$1,387.82

$1,138.01 – $1,637.63

Consensus EPS	$66.41 (FY2026) / $204.47 (FY2027)
NTM EPS (blend of the two years)	$135.44
Anchor P/E	17.0x — Hardware & storage reference 17.0x (no usable peer set)
Growth adjustment	×1.00 (9.0% durable growth vs 9.0% sector)
Earnings-durability factor	×0.60 (forward EPS far above through-cycle)
Leverage adjustment	×1.00
Target P/E	10.2x
Value per share	$1,387.82

Target multiple x NTM EPS. The multiple is anchored on peers/sector, then scaled for durable growth, leverage and how far forward earnings sit above what the business has historically earned.

Forward EV/EBITDA RELATIVE 36% WEIGHT

$1,164.91

$954.55 – $1,375.28

NTM EBITDA (from consensus earnings)	$26.10bn
Anchor EV/EBITDA	11.0x — Hardware & storage reference 11.0x (no usable peer set)
Growth adjustment	×1.00
Earnings-durability factor	×0.60
Target EV/EBITDA	6.6x
Enterprise value	$173.07bn
– Net debt	$0.56bn
Value per share	$1,164.91

Capital-structure-neutral cross-check to forward P/E: it values the operating business and then bridges to equity through net debt.

CALIDAD DE BENEFICIOS · EARNINGS QUALITY

Are the earnings the market is paying for durable?

Trailing EPS	($11.32)
Consensus EPS FY2026	$66.41
Consensus EPS FY2027	$204.47
NTM EPS used	**$135.44**
Through-cycle (historical average) EPS	($10.24)
Forward ÷ through-cycle	20.0x

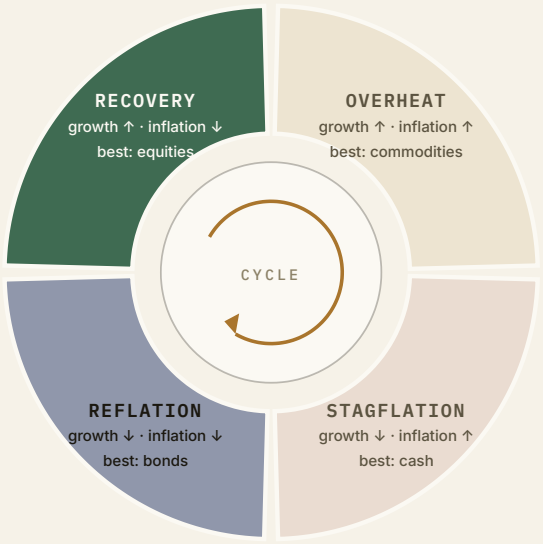

Durable EPS growth used	9.0%
Earnings-durability factor on multiples	×0.60
Basis	consensus

Cyclical or in an earnings inflection. swing from trailing losses to large forward profits (cycle inflection).

Growth source: historical revenue CAGR (capped at 15%); capped at sector growth (cyclical). Multiples price *durable* growth, so a one-year recovery step is never extrapolated, and when forward EPS is far above what the business has historically earned the target multiple is scaled down — the market pays less for peak earnings.

RELOJ DE INVERSIÓN · INVESTMENT CLOCK

Where it sits on the cycle

Recovery and **Reflation** are the phases in which Technology has historically led, on the classic Merrill Lynch Investment Clock sector map (growth × inflation, rotating clockwise: Recovery → Overheat → Stagflation → Reflation).

Illustrative sector affinity, not a call on where the economy is today: this tool reads company fundamentals and consensus, not macro data. Use it to ask whether the thesis above needs the cycle to cooperate. The live phase reading lives in the Reloj de inversión project.

FINANCIAL SUMMARY

Multiples at the current price

2034E	$67.56bn	+3.1%	$6.61bn	9.8%	$4.91bn	$33.18
2035E	$69.25bn	+2.5%	$6.78bn	9.8%	$5.04bn	$34.02

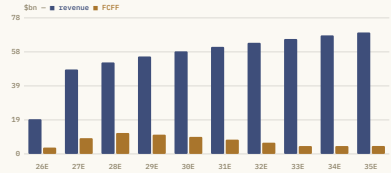

“A” marks figures taken directly from analyst consensus; other forecast rows are the DCF base case with flat interest and the normalised tax rate.

DCF

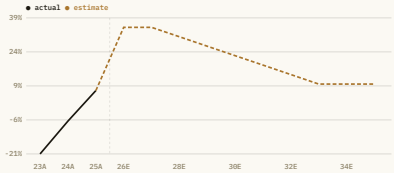

Cross-check — drivers and sensitivity

DRIVER	PATH	WHY
Revenue growth	168.8% → 2.5% over 10y	Years 1–2 follow consensus revenue for FY2026 and FY2027. Growth then decays geometrically from 11.0% to the 2.5% terminal rate as revenue compounds toward $69bn — competitive entry and the law of large numbers compress incremental growth; no single year's step is ever extrapolated.
EBIT margin	6.9% → 35.0% → 9.8% (expands)	Reported margin is 6.9%; year-1 margin is 35.0% (consensus implies 67%; capped at 35%, 1.5x the highest margin ever reported). This is a cyclical business, so we revert 60% of the way toward the through-cycle average of -7.0%, landing at 9.8% — crediting some but not all of current profitability as durable.
Reinvestment (capex)	3.0% → 4.7% of sales	Starts at the historical capex intensity (3.0%) against D&A of 4.3%, converging to 1.10x D&A by the terminal year — a steady state that funds growth without permanent over- or under-investment.
Working capital	14.9% of Δrevenue	Incremental working capital absorbs 14.9% of each year's revenue increase (historical median) — a cash drag as the business scales.
Tax rate	25.0%	Normalised to the trailing effective rate of 25.0%, applied to EBIT to derive NOPAT.
Terminal growth	2.5%	At or below long-run nominal GDP (4.0%); a mature going concern cannot outgrow the economy in perpetuity. Terminal reinvestment is g/ROIC.

REVENUE & FCFF

EBIT MARGIN PATH

EV → EQUITY BRIDGE

DCF VALUE PER SHARE · WACC × TERMINAL GROWTH (VS. PRICE)

WACC \ G	1.5%	2.0%	2.5%	3.0%	3.5%
7.8%	$572	$573	$574	$575	$576
8.6%	$531	$531	$532	$533	$534
9.3%	$495	$496	**$497**	$498	$499
10.1%	$465	$466	$467	$467	$468
10.8%	$439	$440	$440	$441	$441

Shaded against the current price: green = above, terracotta = below. Outlined cell = base case.

The business earns **5.5%** on capital against a **9.3%** cost of capital — a negative spread of **382bps**. Growth here **destroys** value, so terminal assumptions deserve scrutiny.

Model diagnostics

FACTORES

What moves this stock

TYPE	FACTOR	EXPOSURE	EVIDENCE	WHY / MECHANISM
Macro	**Interest rates / discount rate**	MEDIUM	75bps of WACC ≈ $32.85/sh (7%); TV = 32% of EV	Long-duration cash flows: the further out the value sits (terminal-heavy), the more a shift in rates or the equity risk premium re-prices the stock, independent of operations.
Macro	**Economic cycle / demand**	LOW	Revenue growth volatility σ = 0.5% over 2y	Historical top-line dispersion is the cleanest read on cyclicality: a stable compounding base decouples from GDP; a volatile one imports the macro cycle into earnings.
Macro	**Inflation / input costs**	HIGH	−100bps EBIT margin ≈ −$34.19/sh; margin σ = 11.5%	Cost pass-through is the test: firms with pricing power hold margin through inflation; historical margin volatility shows how much of past cost shocks reached the P&L.
Macro	**Credit & refinancing**	LOW	Net debt/EBITDA = -0.4x; EBIT/interest = 8.0x	Leverage converts operating shortfalls into equity stress: the higher the stack, the more a slowdown or a repricing of debt costs flows straight to the equity holder.
Micro	**Competitive erosion**	HIGH	ROIC−WACC spread = -382bps	Excess returns invite entry: the wider the spread, the bigger the prize for competitors — but also the bigger the buffer before growth stops creating value. A thin spread means small competitive slippage flips growth to value destruction.
Micro	**Execution vs expectations**	HIGH	Implied y1 growth 184.3% vs base 168.8%	Market expects MORE than our base — priced for execution. The equity reprices on the gap between delivery and what the tape already discounts, not on absolute results.

TYPE	FACTOR	EXPOSURE	EVIDENCE	WHY / MECHANISM
Micro	**Capital intensity**	LOW	Capex/D&A = 0.69x; capex = 3.0% of sales	Above 1x, the business must keep buying its own growth — FCF conversion stays hostage to the reinvestment cycle; below 1x, depreciation overstates true capital needs and cash conversion runs ahead of earnings.
Micro	**Pricing power / margin stability**	HIGH	EBIT margin σ = 11.5% (range -21%–7%)	Stable margins across cycles are the fingerprint of pricing power; wide swings say the company is a price-taker whose profitability belongs to the environment, not the franchise.

CATALIZADORES

What each lever is worth

- **Cost of capital:** every 75bps of WACC moves fair value by ≈$32.85/share (7%). Rate path and the equity risk premium are the single biggest swing factor.
- **Terminal growth:** 50bps of perpetuity growth is worth ≈$0.79/share — the market's read on the company's long-run competitive position.
- **Operating margin:** each 100bps of EBIT margin across the forecast is worth ≈$34.19/share — watch pricing power, mix and cost discipline in quarterly prints.
- **Top-line delivery:** our base assumes 168.8% year-one growth fading to 2.5%; sustained beats/misses versus that glide path are the cleanest re-rating trigger either way.

RIESGOS

Key risks

- Earnings are cyclically elevated: forward EPS is 20.0x the through-cycle average. A normalisation of pricing, volumes or margins would reset the earnings base the multiples are applied to.
- Our model-only target is -38% versus the Street consensus ($1,975.95); where the model is right the stock has an information edge, where it is wrong the Street's inputs deserve more weight.
- Estimate risk: consensus forecasts can be revised sharply, and the forward-multiple lenses move one-for-one with the earnings they are applied to.
- Multiple risk: target multiples are anchored on sector medians; a de-rating of the peer group lowers the target regardless of company performance.
- Single third-party data source: restatements, non-recurring items or classification differences can shift the output.

Methodology & disclaimer. Generated by an automated, sector-aware valuation engine from public data (Yahoo snapshot as of 2026-07-09). SNDK was classified as **Standard (forward multiples + DCF)**. The 12-month price target triangulates several lenses — target multiples on consensus forward earnings (peer/sector-anchored and adjusted for durable growth, leverage

and earnings durability), a 10-year DCF with decaying growth and mean-reverting margins, and sector-specific models — weights them by profile, applies plausibility guardrails, rolls the result forward at the cost of equity net of dividends, and lightly anchors it to Street consensus when available. Reference multiples are long-run developed-market medians; live peer medians replace them when fetched. Forward numbers come from analyst consensus where available and from reported figures otherwise; they are not a substitute for fundamental judgement. Nothing here is investment advice, a recommendation, or an offer to transact. Do your own due diligence.
